yourself and your family!**

Fight The Bite!

West Nile virus is a potentially serious and sometimes fatal disease with no cure or treatment. It affects people of all ages. People get WNV from the bite of an infected mosquito.

Prevent! Mosquito Breeding

- Dump out standing water collecting in buckets & other containers weekly!
- Unclog gutters, pipes, and drains
- Keep pools and fountains clean, not green
- Cover openings into rain barrels with screen
- Add mosquito fish or bacterial larvicide (like Mosquito Dunks) to artificial ponds & pools to kill mosquito larvae

Tip! Mosquito larvae live in standing water

Protect! Against Bites

- Use a mosquito repellent containing DEET, Picaridin, IR3535, or Oil of Lemon Eucalyptus
- Wear pants and long sleeve shirts
- Install screens in doors and windows

Report! To Vector Control

- Green Pools
- Dead Birds (Jays, Crows, Hawks, Owls)
- Mosquito Breeding
