Mr. Hingtgen,

I am writing to voice my opinion on the proposed Tierra Del Sol Solar and others that are being considered for our Community of Boulevard. I understand that comments will be considered even though the deadline was 1-7-13 (Until the public hearing) I live closest to the Tierra Del Sol Project and can testify that the land that is being destroyed to build this unsightly solar "farm" is an environmental treasure. Having known the prior owner of the property and having spent some time exploring it's 400 or so acres I can testify that there are many species of wildlife and fauna that it provides home to. There is currently a red tail Hawk who is nesting on one of the large pines there .(I see her daily) It is one of the few places where the threatened Roadrunner is nesting as well. Close by there is a golden eagle. There are mammals and reptiles that are only found in the nearby areas.

The water usage that will be required to create this site will drain our aquifer which will effect our well and our home. We have livestock that rely on a clean and plentiful . They will be tearing down the large pines, grading the nesting habitats, blasting the rock formations that have Indian mutates in them and creating an eyesore to our community.

Please consider that concerns of residents and the wildlife with no voices. We do not want or need these . Please save this special piece of property from industrial profiteering.

Diane Ang
