

Existing Condition and Project Purpose

Existing Condition

Quarry Road must be closed frequently due to flooding of Spring Valley Creek, blocking access to the community it serves and to emergency services.

Project Purpose

The purpose of the project is to:

- Build a new elevated bridge to provide all-weather access to the adjacent residential neighborhoods and businesses and decrease emergency services response times
- Realign roadway to improve safety
- Build missing sidewalks and bicycle lanes to complete pedestrian sidewalk and bicycle lane corridors
- Build new facilities to capture and treat stormwater run-off, to improve water quality for local streams and aquifers
