

Vaccines for Respiratory Viruses

Vaccines lower the risk of severe disease. Ask your healthcare provider about which vaccines are right for you.

VACCINE	WHO	WHAT	WHEN
COVID-19 	<ul style="list-style-type: none">Everyone 6 months and older	<ul style="list-style-type: none">Updated vaccine for 2023-2024	<ul style="list-style-type: none">As soon as possible
Influenza (flu) 	<ul style="list-style-type: none">Everyone 6 months and older	<ul style="list-style-type: none">Updated vaccine for 2023-2024	<ul style="list-style-type: none">As soon as possibleThroughout flu season
RSV 	<ul style="list-style-type: none">Older adults (60 years and older)	<ul style="list-style-type: none">One shot	<ul style="list-style-type: none">Available now
RSV 	<ul style="list-style-type: none">Pregnant people	<ul style="list-style-type: none">One shot to pass protection to the baby for the first 6 months of life	<ul style="list-style-type: none">32-36 weeks of pregnancy
RSV Monoclonal Antibody 	<ul style="list-style-type: none">Infants <8 months old (if the mother has not received the vaccine during pregnancy), or high-risk infants 8-19 months old	<ul style="list-style-type: none">One shot that provides antibodies	<ul style="list-style-type: none">Available nowAt infant's first RSV season

There is no recommended waiting period between getting a COVID-19 vaccine and other vaccines. You can get a COVID-19 vaccine and other vaccines, including a flu vaccine, at the same visit.
