

HUMAN PAPILLOMAVIRUS (HPV)

GARDASIL 9

VACCINE SCHEDULE

ROUTINE VACCINATION:
Ages 11-15 years, can be
started at 9 years

2 doses of vaccine
6-12 months apart

CATCH-UP VACCINATION:
Ages 15-26 years if not
already vaccinated

3 doses of vaccine
6-12 months apart

3 doses are recommended for persons who have a weakened immune system and for children ages 9-14 years who got 2 doses of the vaccine less than 5 months apart. According to the Centers for Disease Control and Prevention (CDC), HPV vaccination is also recommended through age 26 years for everyone who did not get vaccinated when they were younger.

**VACCINATION
IS THE BEST
PREVENTION!**

The Gardasil 9 series is the only available vaccine in the United States that has been proven to protect against the most common strains of HPV.

In multiple clinical studies, the Gardasil 9 series has been proven to reduce cancers and warts caused by HPV by up to 90%.
