Pet Owner's Name: Pet's Name: Phone #:

Internal Use Only

Brain Tissue Collection Date: Brain Condition: Satisfactory Unsatisfactory Frozen-Satisfactory Initials:

Notes:

Rabies Testing Instructions

The local health officer or designee [local animal control agency] shall be notified when any person is bitten by a mammal (Title 17, California Code of Regulations, §2606). A directory of local animal control agencies is available at <http://www.sddac.com> (scroll down to bottom of page and click 'Animal Control Agencies by Zip Codes').

Animals Appropriate for Rabies Testing

- Questions about animals appropriate for rabies testing may be directed to the Epidemiology Unit at 619-692-8499, Mon-Fri 8:00 am-5:00 pm. On evenings, weekends, and County-observed holidays, call 858-565-5255 and ask for the Epidemiology Unit Duty Officer.
- Only mammals are susceptible to rabies.
- Bats and other wildlife susceptible to rabies (e.g., skunks, raccoons, foxes, or other wild carnivores) that have bitten or otherwise potentially exposed a human or domestic mammal to rabies should be submitted for testing directly to the San Diego County Public Health Laboratory after first consulting the Epidemiology Unit (see above) as soon as possible.
- Mammals that have bitten or potentially exposed a human or domestic mammal to rabies and that exhibit signs of rabies should be promptly submitted for testing, unless the biting animal is at low risk for rabies.

Domestic Dogs, Cats, and Ferrets

- Bites from domestic dogs, cats, and ferrets must be reported to your local animal control agency (see above).
- If the biting animal is healthy, your local animal control agency will direct its quarantine and daily observation for 10 days following the exposure. Home quarantine is a preferable option if possible. Other options for quarantine are at an approved veterinary facility, boarding facility, or shelter.
- Gravely ill or terminally injured domestic dogs, cats, and ferrets that have bitten or otherwise potentially exposed a human to rabies may be euthanized as a humane alternative to 10-day observation. The brain of a domestic dog, cat, or ferret that is euthanized or dies prior to completion of the 10-day observation period must be tested for rabies unless an exception is specifically authorized by the County of San Diego Public Health Services. Contact the Epidemiology Unit (see above) for guidance and further information.

Rabies Testing

- If rabies testing is indicated, the animal must first be euthanized and refrigerated (not frozen) and then submitted to the San Diego County Public Health Laboratory (SDPHL) at 5570 Overland Ave, Ste. 103, San Diego, CA 92123. The entire carcass will be accepted with the exception of very large animals (e.g., horses). Call SDPHL with any additional questions at 619-692-8500, Mon-Fri 8:00 am – 5:00 pm.
- Directions to SDPHL: From Overland Avenue, turn left into the parking lot, at the stop, go straight and park in front of the left side of Building 5570. Enter through the glass doors, and the Suite 103 window will be on the left.
- The bodies of animals that test negative for rabies and that weigh less than 40 lbs. may be released to a veterinarian or professional animal burial or crematory service for a nominal fee (\$25 payable to County of San Diego at time of submission by check or money order only – write name of animal on memo line of payment). There is no charge for rabies testing. The carcasses of animals that test positive for rabies will be disposed of in accordance with standard laboratory procedures for biohazardous waste.
