Land Acknowledgement

Public Health Services would like to begin by acknowledging the Indigenous Peoples of all the lands that we are on today. While we are meeting on a virtual platform, I would like to take a moment to acknowledge the importance of the lands, which we each call home. We respectfully acknowledge that we are on the traditional territory of the Kumeyaay. We offer our gratitude to the First Nations for their care for, and teachings about, our earth and our relations. May we honor those teachings.

Health Advisory: First Measles Case in San Diego County, since 2019

CAHAN
Alerts

Key Messages

- An infant who had not yet received the first MMR vaccination has returned from overseas travel and has developed laboratory confirmed measles. The case may have exposed others at locations on dates and times listed below.
- Los Angeles County has also reported its first measles case for 2024 on February 1, 2024. That case was also returning from overseas travel, but at this time has no known epidemiologic linkage to the infant case in San Diego County.
- All patients with fever and rash should be screened at the point of entry to a healthcare facility. Providers should immediately institute airborne precautions on patients suspected of measles to prevent healthcare associated exposures.
- Measles should be considered when individuals present with an acute febrile illness and maculopapular rash.
- **Providers should immediately report any suspect measles case to the County Immunization Program. Do not wait for laboratory confirmation.**
- Recommended vaccinations prior to international travel include one dose of MMR for infants from 6 to 12 months of age, and two doses at least 28 days apart for those over 12 months of age.

Health Advisory: Increase in Tuberculosis in San Diego County

Key Messages

- The California Department of Public Health recently provided notice that there was a 15% increase in new cases of active tuberculosis (TB) statewide in 2023, compared to 2022.
- The County of San Diego is also reporting an increase in TB cases, with 243 cases reported in the County in 2023. This represents an increase of about 17% from 2022, when 208 cases were reported.
