SIP	State Implementation Plan
SO _x	Oxides of Sulfur
SO ₂	Sulfur Dioxide
TACs	Toxic Air Contaminants
T-BACT	Toxics Best Available Control Technology
VOCs	Volatile Organic Compounds

EXECUTIVE SUMMARY

This report presents an assessment of potential air quality impacts associated with the East Otay Mesa Specific Plan Amendment in the County of San Diego. The proposed *Sunroad – East Otay Mesa Specific Plan Amendment* project site is located within the East Otay Mesa Business Park Specific Plan (EOMSP) area and encompasses 253.13 acres of the 3,012.7-acre Specific Plan area, including 218.12 acres of lot area and 35.01 acres of right-of-way area. The EOMSP area is located in the unincorporated portion of southern San Diego County, within the Otay Subregional Plan area. The undeveloped Project site is generally east of State Route 125 (SR-125), north of Otay Mesa Road, west of Vann Centre Boulevard, and south of Zinser Road. The site includes nine individual parcels with the following Assessor's Parcel Numbers (APNs): 646-240-30, 646-310-17, 646-080-26, -27, -28, -29, -31, -32, and -33.

The Project proposes a Specific Plan Amendment (SPA) to the EOMSP to establish a new Mixed-Use Village Core area, which would allow for the establishment of a mix of employment, retail, and residential uses. Approval of the project would allow for the entitlement of a maximum of 3,158 dwelling units, 78,000 square feet of general commercial uses, and 765,000 square feet of employment uses, and approximately 51.3 acres of permanent biological open space.

The proposed Project would include construction of public streets within the Project boundary, including Sunroad Boulevard, Sunroad View Drive, Alejandro Drive, and extensions of Harvest Road and David Ridge Drive. All public Project roadways would include Class 2 bike lanes. Project roadways would be developed as a 4-lane Major Road (Sunroad Boulevard: Lone Star Road to Otay Mesa Road), 4-lane Collectors (Harvest Road: Sunroad Boulevard to Otay Mesa Road, Vann Centre Boulevard: Otay Mesa Road to Lone Star Road, and Zinser Road: west of Sunroad Boulevard), and 2-lane Collectors (David Ridge Drive: Sunroad Boulevard to Alta Road, and Zinser Road: Sunroad Boulevard to Lone Star Road).

The proposed Project would construct off-site half-width improvements to Vann Center Boulevard from Otay Mesa Road to just south of Lone Star Road, and to Zinser Road from west of Sunroad Boulevard to Alejandro Drive. Vann Center Boulevard connects to the Project roadways at David

Ridge Drive and Otay Mesa Road. Zinser Road connects to Project roadways at Sunroad Boulevard and Alejandro Drive.

The Project would require the extension of utility lines including sewer, water, electric, and gas lines. Sewer lines would be provided within all Project roadways (Sunroad Boulevard, Harvest Road, Alejandro Drive, Sunroad View Drive, and David Ridge Drive), as well as the portions of off-site roadways within the Project footprint (Zinser Road, Lone Star Road, Vann Center Road, and Otay Mesa Road). The existing south sewer main connection is located adjacent to the Project site at the intersection of Harvest Road and Otay Mesa Road. The Project would connect to the existing 12-inch sewer main at this location. The existing northern sewer main is located near the SR-125 right-of-way, and the Project would extend a 12-inch sewer connection within Zinser Road approximately 1,800 linear feet to connect with the existing 18-inch sewer main.

Water service would be provided by the Otay Water District. The existing main water supply for the Project site is a 24-inch main located within Otay Mesa Road along the Project's southern boundary. Water supply for the Project would be delivered through a 12-inch conveyance system.

Electric lines would be provided by SDG&E within all Project roadways (Sunroad Boulevard, Harvest Road, Alejandro Drive, Sunroad View Drive, and David Ridge Drive), as well as the portions of off-site roadways within the Project footprint (Zinser Road, Lone Star Road, Vann Center Road, and Otay Mesa Road). Connection for the system is anticipated to be within the existing SDG&E easement that runs north and south through the Project site near Harvest Road.

Gas lines would be provided by SDG&E within all Project roadways (Sunroad Boulevard, Harvest Road, Alejandro Drive, Sunroad View Drive, and David Ridge Drive), as well as the portions of off-site roadways within the Project footprint (Zinser Road, Lone Star Road, Vann Center Road). Connection for the gas system is anticipated to be within Otay Mesa Road adjacent to the Project where facilities exist for that purpose.

The Project would not require off-site improvements for stormwater conveyance. Two 60-inch reinforced concrete pipes (RCPs) located in Otay Mesa Road west of Sunroad Boulevard receive

runoff from the majority of the on-site systems, conveying stormwater from the Project site and public roads. Storm drains would be constructed within on-site roadways and Zinser Road to convey stormwater to the existing natural drainage. A portion of the stormwater runoff from Vann Center Road would be treated within a bioretention basin/easement on the adjacent property east of the Project site.

The Project includes a trail segment that would occur in the north-central portion of the Project site, providing pedestrian connectivity along the off-site portion of Zinser Road between the Project's proposed mixed-use neighborhood in the central portion of the site and open space element in the northeastern portion of the site. The project site is located generally at the northeastern corner of Otay Mesa Road and Harvest Road/SR-125 in the Otay Community Planning area, within unincorporated San Diego County. The site is subject to the County's General Plan Regional Category *Village* and General Plan Land Use Designation *Specific Plan Area*. The project area is assigned S-88 Zoning, and is governed by the East Otay Mesa Business Park Specific Plan. The Specific Plan further designates the site as Technology Business Park. The Technology Business Park Land Use Designation is intended for development of manufacturing options and business offices that research, develop, and produce advanced technologies.

In order to establish consistency with the County's General Plan and the East Otay Mesa Business Park Specific Plan, the project would create a new mixed-use land use designation allowing for a mix of residential, employment, and retail uses. This new designation is consistent with the General Plan's Thriving Communities goals. The project would include a range of densities and a mix of uses across the planning area as indicated by the new designation and is anticipated to create a catalyst for development within East Otay Mesa. The maximum numbers of residential units will be based upon the approved peak hour traffic volumes and is anticipated to be approximately 3,158 residential units. The amount of development will be limited based on the total amount of trips that would be generated under the current Specific Plan. Thus the project will not exceed the number of trips evaluated under the prior Environmental Impact Report for the site.

This analysis addresses potential impacts from both the construction and operational phases of the project. To reduce the construction emissions to the extent feasible, fugitive dust control measures

will be implemented during construction. Measures that are incorporated into the project description to reduce emissions associated with construction include the following:

- Application of water three times daily during grading on active grading sites
- Reduce speeds to 15 mph on unpaved roads
- Use architectural coatings with a VOC content of 100 g/l or less for exterior coatings and 50 g/l for interior coatings
- Require the construction fleet to use any combination of catalytic converters, diesel oxidation catalysts, diesel particulate filters, and/or ARB certified Tier III or IV equipment.

These measures constitute best management practices for dust control, architectural coatings, diesel particulate matter, and construction equipment emissions.

The proposed project would result in emissions of air pollutants for both the construction phase and operational phase of the project. Construction emissions would include emissions associated with fugitive dust, heavy construction equipment and construction workers commuting to and from the site. Emissions of criteria pollutants during construction would be below the screening-level thresholds.

The main operational impacts associated with the Project would include impacts associated with traffic; with additional impacts associated with area sources such as energy use and landscaping. Emissions of VOC, NO_x, PM₁₀ and PM_{2.5} would exceed the County's screening-level thresholds, and would therefore result in a significant impact. This impact would also be cumulatively considerable. There are no mitigation measures that would reduce this impact to less than significant levels.

A health risk assessment was conducted to evaluate the potential for project construction or operations to result in a significant impact to nearby sensitive receptors. The risk assessment focused on diesel particulate matter, which is the main TAC emitted from vehicles. The risk assessment concluded that risks were less than significant.

An evaluation of odors indicated that odor impacts would be less than significant.

1.0 INTRODUCTION

This report presents an assessment of potential air quality impacts associated with the East Otay Mesa Specific Plan Amendment in the County of San Diego. The proposed *Sunroad – East Otay Mesa Specific Plan Amendment* project site is located within the East Otay Mesa Business Park Specific Plan (EOMSP) area and encompasses 253.13 acres of the 3,012.7-acre Specific Plan area, including 218.12 acres of lot area and 35.01 acres of right-of-way area. The EOMSP area is located in the unincorporated portion of southern San Diego County, within the Otay Subregional Plan area. The undeveloped Project site is generally east of State Route 125 (SR-125), north of Otay Mesa Road, west of Vann Centre Boulevard, and south of Zinser Road. The site includes nine individual parcels with the following Assessor's Parcel Numbers (APNs): 646-240-30, 646-310-17, 646-080-26, -27, -28, -29, -31, -32, and -33.

The Project site was approved for development in 2012 to subdivide the site into 55 lots. Tentative Map 5538 (TM 5538) consisted of 52 technology business park lots ranging in size from 1.8 acres to 5.3 acres, one lot for a sewer pump station, one storm water detention lot, and a 51.3-acre dedicated open space lot. A 0.41-acre lot within the subdivision is identified as an open space easement established for the protection of biological resources (vernal pools).

Proposed Project

The Project proposes a Specific Plan Amendment (SPA) to the EOMSP to establish a new Mixed-Use Village Core area, which would allow for the establishment of a mix of employment, retail, and residential uses. Approval of the project would allow for the entitlement of a maximum of 3,158 dwelling units, 78,000 square feet of general commercial uses, and 765,000 square feet of employment uses, and approximately 51.3 acres of permanent biological open space.

The proposed Project would include construction of public streets within the Project boundary, including Sunroad Boulevard, Sunroad View Drive, Alejandro Drive, and extensions of Harvest Road and David Ridge Drive. All public Project roadways would include Class 2 bike lanes. Project roadways would be developed as a 4-lane Major Road (Sunroad Boulevard: Lone Star

Road to Otay Mesa Road), 4-lane Collectors (Harvest Road: Sunroad Boulevard to Otay Mesa Road, Vann Centre Boulevard: Otay Mesa Road to Lone Star Road, and Zinser Road: west of Sunroad Boulevard), and 2-lane Collectors (David Ridge Drive: Sunroad Boulevard to Alta Road, and Zinser Road: Sunroad Boulevard to Lone Star Road).

The proposed Project would construct off-site half-width improvements to Vann Center Boulevard from Otay Mesa Road to just south of Lone Star Road, and to Zinser Road from west of Sunroad Boulevard to Alejandro Drive. Vann Center Boulevard connects to the Project roadways at David Ridge Drive and Otay Mesa Road. Zinser Road connects to Project roadways at Sunroad Boulevard and Alejandro Drive.

The Project would require the extension of utility lines including sewer, water, electric, and gas lines. Sewer lines would be provided within all Project roadways (Sunroad Boulevard, Harvest Road, Alejandro Drive, Sunroad View Drive, and David Ridge Drive), as well as the portions of off-site roadways within the Project footprint (Zinser Road, Lone Star Road, Vann Center Road, and Otay Mesa Road). The existing south sewer main connection is located adjacent to the Project site at the intersection of Harvest Road and Otay Mesa Road. The Project would connect to the existing 12-inch sewer main at this location. The existing northern sewer main is located near the SR-125 right-of-way, and the Project would extend a 12-inch sewer connection within Zinser Road approximately 1,800 linear feet to connect with the existing 18-inch sewer main.

Water service would be provided by the Otay Water District. The existing main water supply for the Project site is a 24-inch main located within Otay Mesa Road along the Project's southern boundary. Water supply for the Project would be delivered through a 12-inch conveyance system.

Electric lines would be provided by SDG&E within all Project roadways (Sunroad Boulevard, Harvest Road, Alejandro Drive, Sunroad View Drive, and David Ridge Drive), as well as the portions of off-site roadways within the Project footprint (Zinser Road, Lone Star Road, Vann Center Road, and Otay Mesa Road). Connection for the system is anticipated to be within the existing SDG&E easement that runs north and south through the Project site near Harvest Road.

Gas lines would be provided by SDG&E within all Project roadways (Sunroad Boulevard, Harvest Road, Alejandro Drive, Sunroad View Drive, and David Ridge Drive), as well as the portions of off-site roadways within the Project footprint (Zinser Road, Lone Star Road, Vann Center Road). Connection for the gas system is anticipated to be within Otay Mesa Road adjacent to the Project where facilities exist for that purpose.

The Project would not require off-site improvements for stormwater conveyance. Two 60-inch reinforced concrete pipes (RCPs) located in Otay Mesa Road west of Sunroad Boulevard receive runoff from the majority of the on-site systems, conveying stormwater from the Project site and public roads. Storm drains would be constructed within on-site roadways and Zinser Road to convey stormwater to the existing natural drainage. A portion of the stormwater runoff from Vann Center Road would be treated within a bioretention basin/easement on the adjacent property east of the Project site.

The Project includes a trail segment that would occur in the north-central portion of the Project site, providing pedestrian connectivity along the off-site portion of Zinser Road between the Project's proposed mixed-use neighborhood in the central portion of the site and open space element in the northeastern portion of the site.

Discretionary Actions

Specific Plan Amendment – The Specific Plan Amendment proposes to add a new mixed-use land use designation that would allow for a mix of residential, employment, and retail uses for the approximately 253-acre Project area. The mixed-use Designation would include a range of densities and a mix of uses across the Project area.

Subregional Plan Amendment – In addition to the Specific Plan Amendment, the Project would require an Amendment to the Otay Subregional Plan. The Project site is governed by the Otay Subregional Plan (Volume 1). The focus of the Subregional Plan is to promote industrial development in the Otay Mesa/International Border area with the Mexico region, and the plan describes the EOMSP as the planning framework for development in East Otay Mesa. The Project

proposes to amend the Otay Subregional Plan in order to allow residential mixed-uses that will support the development of industrial uses in the area by providing live/work and commercial service opportunities.

Rezone – The Project site is zoned Specific Plan Area (S-88) with Technology Business Park and Commercial Overlay land use designations. The Project proposes to retain the S-88 zoning designation, but would change the land use designation and the regulatory site standards within the Specific Plan to Mixed-Use, to allow for development of the project site as a Village Core. The new land use designation consists of regulatory site standards specific to the use, and as described in Table 3.2-1 of the Specific Plan. The County requires a Rezone when any of the regulatory site standards are changed.

Tentative Map – The Project site was approved for development in 2012 to subdivide the site into 55 lots. Tentative Map 5538 (TM 5538) consisted of 52 technology business park lots ranging in size from 1.8 acres to 5.3 acres, one lot for a sewer pump station, one storm water detention lot, and a 51.3-acre dedicated open space lot. A 0.41-acre lot within the subdivision is identified as an open space easement established for the protection of biological resources (vernal pools).

The Project proposes a new Tentative Map for development of the Project site in accordance with the proposed Specific Plan Amendment. The proposed Tentative Map would subdivide the Project area. The project site is relatively flat and consists primarily of non-native vegetative grasslands. Earthwork is estimated to consist of 1,350,000 cubic yards of balanced cut and fill.

The new mixed-use land use designation is consistent with the General Plan's Thriving Communities goals. The project would include a range of densities and a mix of uses across the planning area as indicated by the new designation and is anticipated to create a catalyst for development within East Otay Mesa. The maximum numbers of residential units will be based upon the approved peak hour traffic volumes and is anticipated to be approximately 3,158 residential units.

This Air Quality Technical Report includes an evaluation of existing conditions in the project vicinity, an assessment of potential impacts associated with project construction, and an evaluation of project operational impacts.

2.0 EXISTING CONDITIONS

The project site is located in an undeveloped area that is designated for Technology Business Park uses. The area surrounding the site is designated to be developed with Technology Business Park uses to the west, north, and east. The area south of the site across Otay Mesa Road includes existing industrial land uses. There are three individual residential units located to the east of the site on Otay Mesa Road; however, these residences will be removed to make way for the Technology Business Park uses proposed for that location.

2.1 Regulatory Framework

2.1.1 Federal Regulations

Air quality is defined by ambient air concentrations of specific pollutants identified by the United States Environmental Protection Agency (EPA) to be of concern with respect to health and welfare of the general public. The EPA is responsible for enforcing the Federal Clean Air Act (CAA) of 1970 and its 1977 and 1990 Amendments. The CAA required the EPA to establish National Ambient Air Quality Standards (NAAQS), which identify concentrations of pollutants in the ambient air below which no adverse effects on the public health and welfare are anticipated. In response, the EPA established both primary and secondary standards for seven pollutants (called “criteria” pollutants). The seven pollutants regulated under the NAAQS are as follows: ozone (O₃), carbon monoxide (CO), nitrogen dioxide (NO₂), respirable particulate matter (or particulate matter with an aerodynamic diameter of 10 microns or less, PM₁₀), fine particulate matter (or particulate matter with an aerodynamic diameter of 2.5 microns or less, PM_{2.5}), sulfur dioxide (SO₂), and lead (Pb). Primary standards are designed to protect human health with an adequate margin of safety. Secondary standards are designed to protect property and the public welfare from air pollutants in the atmosphere. Areas that do not meet the NAAQS for a particular pollutant are considered to be “non-attainment areas” for that pollutant. The San Diego Air Basin (SDAB) has been designated a marginal non-attainment area for the 8-hour NAAQS for O₃.

The following specific descriptions of health effects for each of the criteria air pollutants associated with project construction and operations are based on EPA (EPA 2007) and the California Air Resources Board (ARB) (ARB 2005).

Ozone. O₃ is considered a photochemical oxidant, which is a chemical that is formed when reactive organic gases (ROG) and oxides of nitrogen (NO_x), both by-products of combustion, react in the presence of ultraviolet light. O₃ is considered a respiratory irritant and prolonged exposure can reduce lung function, aggravate asthma and increase susceptibility to respiratory infections. Children and those with existing respiratory diseases are at greatest risk from exposure to O₃.

Carbon Monoxide. CO is a product of combustion, and the main source of CO in the SDAB is from motor vehicle exhaust. CO is an odorless, colorless gas. CO affects red blood cells in the body by binding to hemoglobin and reducing the amount of oxygen that can be carried to the body's organs and tissues. CO can cause health effects to those with cardiovascular disease, and can also affect mental alertness and vision.

Nitrogen Dioxide. NO₂ is also a by-product of fuel combustion, and is formed both directly as a product of combustion and in the atmosphere through the reaction of nitrogen oxide (NO) with oxygen. NO₂ is a respiratory irritant and may affect those with existing respiratory illness, including asthma. NO₂ can also increase the risk of respiratory illness.

Respirable Particulate Matter and Fine Particulate Matter. Respirable particulate matter, or PM₁₀, refers to particulate matter with an aerodynamic diameter of 10 microns or less. Fine particulate matter, or PM_{2.5}, refers to particulate matter with an aerodynamic diameter of 2.5 microns or less. Particulate matter in this size range has been determined to have the potential to lodge in the lungs and contribute to respiratory problems. PM₁₀ and PM_{2.5} arise from a variety of sources, including road dust, diesel exhaust, combustion, tire and brake wear, construction operations and windblown dust. PM₁₀ and PM_{2.5} can increase susceptibility to respiratory infections and can aggravate existing respiratory diseases such as asthma and chronic bronchitis. PM_{2.5} is considered to have the potential to lodge deeper in the lungs.

Sulfur dioxide. SO₂ is a colorless, reactive gas that is produced from the burning of sulfur-containing fuels such as coal and oil, and by other industrial processes. Generally, the highest concentrations of SO₂ are found near large industrial sources. SO₂ is a respiratory irritant that can cause narrowing of the airways leading to wheezing and shortness of breath. Long-term exposure to SO₂ can cause respiratory illness and aggravate existing cardiovascular disease.

Lead. Pb in the atmosphere occurs as particulate matter. Pb has historically been emitted from vehicles combusting leaded gasoline, as well as from industrial sources. With the phase-out of leaded gasoline, large manufacturing facilities are the sources of the largest amounts of lead emissions. Pb has the potential to cause gastrointestinal, central nervous system, kidney and blood diseases upon prolonged exposure. Pb is also classified as a probable human carcinogen.

2.1.2 State Regulations

California Clean Air Act. The California Clean Air Act was signed into law on September 30, 1988, and became effective on January 1, 1989. The Act requires that local air districts implement regulations to reduce emissions from mobile sources through the adoption and enforcement of transportation control measures. The California Clean Air Act required the SDAB to achieve a five percent annual reduction in ozone precursor emissions from 1987 until the standards are attained. If this reduction cannot be achieved, all feasible control measures must be implemented. Furthermore, the California Clean Air Act required local air districts to implement a Best Available Control Technology rule and to require emission offsets for non-attainment pollutants.

The ARB is the state regulatory agency with authority to enforce regulations to both achieve and maintain air quality in the state. The ARB is responsible for the development, adoption, and enforcement of the state's motor vehicle emissions program, as well as the adoption of the California Ambient Air Quality Standards (CAAQS). The ARB also reviews operations and programs of the local air districts, and requires each air district with jurisdiction over a non-attainment area to develop its own strategy for achieving the NAAQS and CAAQS. The CAA allows states to adopt ambient air quality standards and other regulations provided they are at least as stringent as federal standards. The ARB has established the more stringent CAAQS for the six

criteria pollutants through the California Clean Air Act of 1988, and also has established CAAQS for additional pollutants, including sulfates, hydrogen sulfide, vinyl chloride and visibility-reducing particles. The SDAB is currently classified as a non-attainment area under the CAAQS for O₃, PM₁₀, and PM_{2.5}. It should be noted that the ARB does not differentiate between attainment of the 1-hour and 8-hour CAAQS for O₃; therefore, if an air basin records exceedances of either standard the area is considered a non-attainment area for the CAAQS for O₃. The SDAB has recorded exceedances of both the 1-hour and 8-hour CAAQS for O₃. The following specific descriptions of health effects for the additional California criteria air pollutants are based on the ARB (ARB 2001).

Sulfates. Sulfates are the fully oxidized ionic form of sulfur. In California, emissions of sulfur compounds occur primarily from the combustion of petroleum-derived fuels (e.g., gasoline and diesel fuel) that contain sulfur. This sulfur is oxidized to sulfur dioxide (SO₂) during the combustion process and subsequently converted to sulfate compounds in the atmosphere. The conversion of SO₂ to sulfates takes place comparatively rapidly and completely in urban areas of California due to regional meteorological features. The ARB's sulfates standard is designed to prevent aggravation of respiratory symptoms. Effects of sulfate exposure at levels above the standard include a decrease in ventilatory function, aggravation of asthmatic symptoms and an increased risk of cardio-pulmonary disease. Sulfates are particularly effective in degrading visibility, and due to fact that they are usually acidic, can harm ecosystems and damage materials and property.

Hydrogen Sulfide. H₂S is a colorless gas with the odor of rotten eggs. It is formed during bacterial decomposition of sulfur-containing organic substances. Also, it can be present in sewer gas and some natural gas, and can be emitted as the result of geothermal energy exploitation. Breathing H₂S at levels above the standard would result in exposure to a very disagreeable odor. In 1984, an ARB committee concluded that the ambient standard for H₂S is adequate to protect public health and to significantly reduce odor annoyance.

Vinyl Chloride. Vinyl chloride, a chlorinated hydrocarbon, is a colorless gas with a mild, sweet odor. Most vinyl chloride is used to make polyvinyl chloride (PVC) plastic and vinyl products.

Vinyl chloride has been detected near landfills, sewage plants and hazardous waste sites, due to microbial breakdown of chlorinated solvents. Short-term exposure to high levels of vinyl chloride in air causes central nervous system effects, such as dizziness, drowsiness and headaches. Long-term exposure to vinyl chloride through inhalation and oral exposure causes liver damage. Cancer is a major concern from exposure to vinyl chloride via inhalation. Vinyl chloride exposure has been shown to increase the risk of angiosarcoma, a rare form of liver cancer, in humans.

Visibility Reducing Particles. Visibility-reducing particles consist of suspended particulate matter, which is a complex mixture of tiny particles that consists of dry solid fragments, solid cores with liquid coatings, and small droplets of liquid. These particles vary greatly in shape, size and chemical composition, and can be made up of many different materials such as metals, soot, soil, dust, and salt. The CAAQS is intended to limit the frequency and severity of visibility impairment due to regional haze. A separate standard for visibility-reducing particles that is applicable only in the Lake Tahoe Air Basin is based on reduction in scenic quality.

Table 1 presents a summary of the ambient air quality standards adopted by the federal and California Clean Air Acts.

**Table 1
Ambient Air Quality Standards**

POLLUTANT	AVERAGE TIME	CALIFORNIA STANDARDS		NATIONAL STANDARDS		
		Concentration	Method	Primary	Secondary	Method
Ozone (O ₃)	1 hour	0.09 ppm (176 µg/m ³)	Ultraviolet Photometry	--	--	Ethylene Chemiluminescence
	8 hour	0.070 ppm (137 µg/m ³)		0.075 ppm (147 µg/m ³)	0.075 ppm (147 µg/m ³)	
Carbon Monoxide (CO)	8 hours	9.0 ppm (10 mg/m ³)	Non-Dispersive Infrared Spectroscopy (NDIR)	9 ppm (10 mg/m ³)	--	Non-Dispersive Infrared Spectroscopy (NDIR)
	1 hour	20 ppm (23 mg/m ³)		35 ppm (40 mg/m ³)		
Nitrogen Dioxide (NO ₂)	Annual Average	0.030 ppm (56 µg/m ³)	Gas Phase Chemiluminescence	0.053 ppm (100 µg/m ³)	--	Gas Phase Chemiluminescence
	1 hour	0.18 ppm (338 µg/m ³)		0.100 ppm (188 µg/m ³)	--	
Sulfur Dioxide (SO ₂)	24 hours	0.04 ppm (105 µg/m ³)	Ultraviolet Fluorescence	--	--	Pararosaniline
	3 hours	--		--	0.5 ppm (1300 µg/m ³)	
	1 hour	0.25 ppm (655 µg/m ³)		0.075 ppm (196 µg/m ³)	--	
Respirable Particulate Matter (PM ₁₀)	24 hours	50 µg/m ³	Gravimetric or Beta Attenuation	150 µg/m ³	150 µg/m ³	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	20 µg/m ³		--	--

Toxic Air Contaminants. In 1983, the California Legislature enacted a program to identify the health effects of Toxic Air Contaminants (TACs) and to reduce exposure to these contaminants to protect the public health (AB 1807: Health and Safety Code sections 39650-39674). The Legislature established a two-step process to address the potential health effects from TACs. The first step is the risk assessment (or identification) phase. The second step is the risk management (or control) phase of the process.

The State of California has identified diesel particulate matter as a TAC. Diesel particulate matter is emitted from on- and off-road vehicles that utilize diesel as fuel. Following identification of diesel particulate matter as a TAC in 1998, the ARB has worked on developing strategies and regulations aimed at reducing the emissions and associated risk from diesel particulate matter. The overall strategy for achieving these reductions is found in the *Risk Reduction Plan to Reduce Particulate Matter from Diesel-Fueled Engines and Vehicles* (State of California 2000). A stated goal of the plan is to reduce the cancer risk statewide arising from exposure to diesel particulate matter by 75 percent by 2010 and by 85 percent by 2020. The *Risk Reduction Plan* contains the following three components:

- New regulatory standards for all new on-road, off-road and stationary diesel-fueled engines and vehicles to reduce diesel particulate matter emissions by about 90 percent overall from current levels;
- New retrofit requirements for existing on-road, off-road and stationary diesel-fueled engines and vehicles where determined to be technically feasible and cost-effective; and
- New Phase 2 diesel fuel regulations to reduce the sulfur content levels of diesel fuel to no more than 15 ppm to provide the quality of diesel fuel needed by the advanced diesel particulate matter emission controls.

As an ongoing process, the ARB reviews air contaminants and identifies those that are classified as TACs. The ARB also continues to establish new programs and regulations for the control of TACs, including diesel particulate matter, as appropriate.

The local air pollution control district (APCD) has the primary responsibility for the development and implementation of rules and regulations designed to attain the NAAQS and CAAQS, as well as the permitting of new or modified sources, development of air quality management plans, and adoption and enforcement of air pollution regulations. The San Diego APCD is the local agency responsible for the administration and enforcement of air quality regulations in San Diego County.

The APCD and the San Diego Association of Governments (SANDAG) are responsible for developing and implementing the clean air plan for attainment and maintenance of the ambient air quality standards in the SDAB. The San Diego County Regional Air Quality Strategy (RAQS) was initially adopted in 1991, and is updated on a triennial basis. The RAQS was updated in 1995, 1998, 2001, 2004 and most recently in 2009 (APCD 2009). The RAQS outlines APCD's plans and control measures designed to attain the state air quality standards for O₃. The RAQS does not address the state air quality standards for PM₁₀ or PM_{2.5}. The APCD has also developed the air basin's input to the State Implementation Plan (SIP), which is required under the Federal Clean Air Act for areas that are out of attainment of air quality standards. The SIP includes the APCD's plans and control measures for attaining the O₃ NAAQS. The SIP is also updated on a triennial basis. The latest SIP update that has been approved by EPA was in 2007. The current SIP is the APCD's *Eight-Hour Ozone Attainment Plan for San Diego County* (hereinafter referred to as the Attainment Plan) (APCD 2007). The Attainment Plan forms the basis for the SIP update, as it contains documentation on emission inventories and trends, the APCD's emission control strategy, and an attainment demonstration that shows that the SDAB will meet the NAAQS for O₃. Emission inventories, projections, and trends in the Attainment Plan are based on the latest O₃ SIP planning emission projections compiled and maintained by ARB. The inventories are based on data submitted by stakeholder agencies, including SANDAG, based on growth projections in municipal General Plans.

The ARB compiles annual statewide emission inventories in its emission-related information database, the California Emission Inventory Development and Reporting System (CEIDARS). Emission projections for past and future years were generated using the California Emission Forecasting System (CEFS), developed by ARB to project emission trends and track progress towards meeting emission reduction goals and mandates. CEFS utilizes the most current growth

and emissions control data available and agreed upon by the stakeholder agencies to provide comprehensive projections of anthropogenic (human activity-related) emissions for any year from 1975 through 2030. Local air districts are responsible for compiling emissions data for all point sources and many stationary area-wide sources. For mobile sources, CEFS integrates emission estimates from ARB's EMFAC and OFFROAD models. SANDAG incorporates data regarding highway and transit projects into their Travel Demand Models for estimating and projecting vehicle miles traveled (VMT) and speed. The ARB's on-road emissions inventory in EMFAC relies on these VMT and speed estimates.

Because the ARB mobile source emission projections and SANDAG growth projections are based on population and vehicle trends and land use plans developed by the cities and by the County as part of the development of General Plans, projects that propose development that is consistent with the growth anticipated by the general plans would be consistent with the RAQS and the Attainment Plan. In the event that a project would propose development which is less dense than anticipated within the general plan, the project would likewise be consistent with the RAQS and the Attainment Plan. If a project proposes development that is greater than that anticipated in the general plan and SANDAG's growth projections, the project might be in conflict with the RAQS and SIP, and might have a potentially significant impact on air quality.

2.1.3 Local Regulations

In San Diego County, the San Diego APCD is the regulatory agency that is responsible for maintaining air quality, including implementation and enforcement of state and federal regulations. The project site is located in the County of San Diego. The County of San Diego has adopted a General Plan that includes a Conservation Element that adopts policies to reduce air emissions and improve air quality within the County.

2.2 Climate and Meteorology

The project site is located in the SDAB. The climate of the SDAB is dominated by a semi-permanent high pressure cell located over the Pacific Ocean. This cell influences the direction of prevailing winds (westerly to northwesterly) and maintains clear skies for much of the year. The high pressure cell also creates two types of temperature inversions that may act to degrade local air quality.

Subsidence inversions occur during the warmer months as descending air associated with the Pacific high pressure cell comes into contact with cool marine air. The boundary between the two layers of air creates a temperature inversion that traps pollutants. The other type of inversion, a radiation inversion, develops on winter nights when air near the ground cools by heat radiation and air aloft remains warm. The shallow inversion layer formed between these two air masses also can trap pollutants. As the pollutants become more concentrated in the atmosphere, photochemical reactions occur that produce ozone, commonly known as smog.

Figure 1 provides a graphic representation of the prevailing winds in the project vicinity, as measured in Chula Vista, which is the closest meteorological monitoring station to the site.

Figure 1. Wind Rose – Chula Vista

2.3 Background Air Quality

The APCD operates a network of ambient air monitoring stations throughout San Diego County. The purpose of the monitoring stations is to measure ambient concentrations of the pollutants and determine whether the ambient air quality meets the CAAQS and the NAAQS. The nearest ambient monitoring stations to the project site are the Chula Vista monitoring station on J Street in Chula Vista, the Paseo International monitoring station at the Otay Mesa border crossing, and the Donovan Correctional Facility monitoring station on Otay Mesa. Pollutant levels at the Otay Mesa border crossing are elevated because they reflect emissions from vehicles idling at the crossing. The ambient background data from the Chula Vista monitoring station for O₃, NO₂, and

PM_{2.5} and the ambient background data from the Donovan monitoring station for PM₁₀, and PM_{2.5} are most representative of the site. The nearest location that monitored CO was the downtown San Diego monitoring station. Ambient concentrations of pollutants over the last three years are presented in Table 2.

The 8-hour federal ozone standard was not exceeded at the Chula Vista monitoring station during the period from 2013 through 2015. The 8-hour CAAQS was exceeded once in 2014. The Chula Vista monitoring station has measured exceedances of the CAAQS for ozone, and the Donovan monitoring station has measured exceedances of the CAAQS for PM₁₀ during the period from 2012 to 2014. The data from the monitoring station indicates that air quality is in attainment of all other standards.

Table 2 Ambient Background Concentrations (ppm unless otherwise indicated)						
Pollutant	Averaging Time	2013	2014	2015	Most Stringent Ambient Air Quality Standard	Monitoring Station
Ozone	8 hour	0.062	0.072	0.066	0.070	Chula Vista
	1 hour	0.073	0.093	0.088	0.09	Chula Vista
PM _{2.5}	Annual	9.4 µg/m ³	9.2 µg/m ³	8.3 µg/m ³	12 µg/m ³	Chula Vista
	24 hour maximum ¹	21.9 µg/m ³	26.5 µg/m ³	33.5 µg/m ³	35 µg/m ³	Chula Vista
	98 th Percentile, 24 hour ¹	18.0 µg/m ³	19.3 µg/m ³	19.3 µg/m ³	35 µg/m ³	Chula Vista
PM ₁₀	Annual	25.3 µg/m ³	30.1 µg/m ³	34.4 µg/m ³	20 µg/m ³	Donovan
	24 hour	65 µg/m ³	58 µg/m ³	136 µg/m ³	50 µg/m ³	Donovan
NO ₂	Annual	0.011	0.011	0.010	0.030	Chula Vista
	1 hour	0.057	0.055	0.049	0.100	Chula Vista
CO	8 hour	2.1	1.9	1.9	9.0	San Diego
	1 hour	3.0	2.7	2.6	20.0	San Diego

¹PM_{2.5} 24-hour NAAQS is defined as the 98th percentile of 3 years of measurements. One exceedance does not indicate a violation of the standard.

3.0 SIGNIFICANCE CRITERIA AND ANALYSIS METHODOLOGIES

The County of San Diego (County of San Diego 2007) has approved guidelines for determining significance based on Appendix G.III of the State CEQA Guidelines. Section 4.0 of the County of San Diego Department of Planning and Land Use *Guidelines for Determining Significance and Report Format and Content Requirements – Air Quality* (County of San Diego 2007) provides guidance that a project would have a significant environmental impact if:

1. The project will conflict with or obstruct the implementation of the San Diego Regional Air Quality Strategy (RAQS) and/or applicable portions of the State Implementation Plan (SIP).
2. The project would result in emissions that would violate any air quality standard or contribute substantially to an existing or projected air quality violation.
3. The project will result in a cumulatively considerable net increase of any criteria pollutant for which the San Diego Air Basin is non-attainment under an applicable Federal or State Ambient Air Quality Standard (including emissions which exceed the SLTs for ozone precursors listed in Table 5 of the Guidelines).
4. The project will expose sensitive receptors to substantial pollutant concentrations.
5. The project which is not an agricultural, commercial or an industrial activity subject to SDAPCD standards, as a result of implementation, will either generate objectionable odors or place sensitive receptors next to existing objectionable odors, which will affect a considerable number of persons or the public.

The County of San Diego recognizes the APCD's established screening level thresholds for air quality emissions (Rules 20.1 et seq.) as screening-level thresholds for land development projects. As stated above, projects that propose development that is consistent with the growth anticipated by the general plans and SANDAG's growth forecasts would be consistent with the RAQS and SIP. Also, projects that are consistent with the SIP rules (i.e., the federally-approved rules and regulations adopted by the APCD) are consistent with the SIP. Thus projects would be required to conform with measures adopted in the RAQS (including use of low-VOC architectural coatings, use of low-NO_x water heaters, and compliance with rules and regulations governing stationary

sources) and would also be required to comply with all applicable rules and regulations adopted by the APCD.

To determine whether a project would (a) result in emissions that would violate any air quality standard or contribute substantially to an existing or projected air quality violation; or (b) result in a cumulatively considerable net increase of PM₁₀ or PM_{2.5} or exceed quantitative thresholds for O₃ precursors, oxides of nitrogen (NO_x) and volatile organic compounds (VOCs), project emissions may be evaluated based on the quantitative emission thresholds established by the San Diego APCD. As part of its air quality permitting process, the APCD has established thresholds in Rule 20.2 for the preparation of Air Quality Impact Assessments (AQIA). The County of San Diego also recommends the SCAQMD's screening threshold of 55 pounds per day or 10 tons per year as a significance threshold for PM_{2.5}.

For CEQA purposes, these screening criteria can be used as numeric methods to demonstrate that a project's total emissions would not result in a significant impact to air quality. The screening thresholds are included in the table below.

**Table 3
Screening-Level Thresholds for Air Quality Impact Analysis**

Pollutant	Total Emissions		
Construction Emissions			
	Lb. per Day		
Respirable Particulate Matter (PM ₁₀)	100		
Fine Particulate Matter (PM _{2.5})	55		
Oxides of Nitrogen (NO _x)	250		
Oxides of Sulfur (SO _x)	250		
Carbon Monoxide (CO)	550		
Volatile Organic Compounds (VOCs) ¹	75		
Operational Emissions			
	Lb. Per Hour	Lb. per Day	Tons per Year
Respirable Particulate Matter (PM ₁₀)	---	100	15
Fine Particulate Matter (PM _{2.5})	---	55	10
Oxides of Nitrogen (NO _x)	25	250	40
Oxides of Sulfur (SO _x)	25	250	40
Carbon Monoxide (CO)	100	550	100
Lead and Lead Compounds	---	3.2	0.6
Volatile Organic Compounds (VOC)	---	75	13.7
Toxic Air Contaminant Emissions			
Excess Cancer Risk	1 in 1 million without Toxics Best Available Control Technology (T-BACT) 10 in 1 million with T-BACT		
Non-Cancer Hazard	1.0		

In the event that emissions exceed these screening-level thresholds, modeling would be required to demonstrate that the project’s total air quality impacts result in ground-level concentrations that are below the State and Federal Ambient Air Quality Standards, including appropriate background levels. For nonattainment pollutants (ozone, with ozone precursors NO_x and VOCs, PM_{2.5} and PM₁₀), if emissions exceed the thresholds shown in Table 3, the project could have the potential to result in a cumulatively considerable net increase in these pollutants and thus could have a significant impact on the ambient air quality.

In addition to impacts from criteria pollutants, project impacts may include emissions of pollutants identified by the state and federal government as toxic air contaminants (TACs) or Hazardous Air Pollutants (HAPs). In San Diego County, the County Planning & Development Services department identifies an excess cancer risk level of 1 in 1 million or less for projects that do not

implement Toxics Best Available Control Technology (T-BACT), and an excess cancer risk level of 10 in 1 million or less for projects that do implement T-BACT. The significance threshold for non-cancer health effects is a health hazard index of one or less. These significance thresholds are consistent with the San Diego Air Pollution Control District's Rule 1210 requirements for stationary sources. If a project has the potential to result in emissions of any TAC or HAP which result in a cancer risk of greater than 1 in 1 million without T-BACT, 10 in 1 million with T-BACT, or health hazard index of one or more, the project would be deemed to have a potentially significant impact.

With regard to evaluating whether a project would have a significant impact on sensitive receptors, air quality regulators typically define sensitive receptors as residences, schools (Preschool-12th Grade), hospitals, resident care facilities, or day-care centers, or other facilities that may house individuals with health conditions that would be adversely impacted by changes in air quality. Any project which has the potential to directly impact a sensitive receptor located within 1 mile and results in a health risk greater than the risk significance thresholds discussed above would be deemed to have a potentially significant impact. One mile was chosen as a conservative means of evaluating significance. As discussed in the SCAQMD's CEQA Air Quality Handbook, if there is an industrial source within a quarter mile of a sensitive receptor, planners should review the potential for toxic impacts. Therefore, use of a one mile radius is conservative.

APCD Rule 51 (Public Nuisance) also prohibits emission of any material which causes nuisance to a considerable number of persons or endangers the comfort, health or safety of any person. A project that proposes a use which would produce objectionable odors would be deemed to have a significant odor impact if it would affect a considerable number of offsite receptors.

The impacts associated with construction and operation of the project were evaluated for significance based on these significance criteria.

4.0 PROJECT IMPACT ANALYSIS

The proposed East Otay Mesa Specific Plan Amendment includes both construction and operational impacts. Construction impacts include emissions associated with the construction of the project. Operational impacts include emissions associated with the project, including traffic, at full buildout. It should be noted that specific land uses are not identified at this time; therefore, this analysis presents an evaluation of impacts associated with preliminary site development, and a preliminary evaluation of impacts associated with full buildout and operation of the project. Because each phase of the project will be required to undergo a design review, when phases are more fully designed, they will undergo further environmental review prior to permitting. In other words, each phase of development would undergo a separate site plan review, and if additional environmental review is necessary, will undergo a CEQA review in which potential air quality impacts will be further evaluated. The purpose of this analysis is to provide a program-level analysis of potential impacts for the entire Specific Plan Amendment.

4.1 Conformance to the Regional Air Quality Strategy

4.1.1 Guidelines for the Determination of Significance

The project will result in a significant impact to air quality if:

The project will conflict with or obstruct the implementation of the San Diego Regional Air Quality Strategy (RAQS) and/or applicable portions of the State Implementation Plan (SIP).

The RAQS outlines APCD's plans and control measures designed to attain the State air quality standards for ozone. In addition, the APCD relies on the SIP, which includes the APCD's plans and control measures for attaining the ozone NAAQS. These plans accommodate emissions from all sources, including natural sources, through implementation of control measures, where feasible, on stationary sources to attain the standards. Mobile sources are regulated by the USEPA and the ARB, and the emissions and reduction strategies related to mobile sources are considered in the RAQS and SIP.

The RAQS relies on information from ARB and SANDAG, including projected growth in the County, mobile, area and all other source emissions in order to project future emissions and determine from that the strategies necessary for the reduction of stationary source emissions through regulatory controls. The ARB mobile source emission projections and SANDAG growth projections are based on population and vehicle trends and land use plans developed by the cities and by the County. As such, projects that propose development that is consistent with the growth anticipated by the general plans would be consistent with the RAQS. In the event that a project would propose development which is less dense than anticipated within the general plan, the project would likewise be consistent with the RAQS. If a project proposes development that is greater than that anticipated in the County of San Diego General Plan and SANDAG's growth projections, the project would be in conflict with the RAQS and SIP, and might have a potentially significant impact on air quality. This situation would warrant further analysis to determine if the proposed project and the surrounding projects exceed the growth projections used in the RAQS for the specific subregional area.

4.1.2 Significance of Impacts Prior to Mitigation

The project is proposing a rezone to establish a new mixed-use land use category within the East Otay Mesa Specific Plan. The new land use categories would allow for employment, retail, and residential uses within the area. The project will provide a mix of uses at the site that will serve the Otay Mesa area, and will allow for residential uses at the site.

The Otay Subregional Plan did not address residential uses at the site; therefore, the project is required to revise the Subregional Plan to allow residential uses, which triggers a General Plan Amendment. However, the project is consistent with the intensity scale in the General Plan and would not result in additional vehicle trips above the levels anticipated in the General Plan. The project would therefore not differ from the analysis included within the RAQS and SIP to demonstrate attainment.

Providing a mix of uses at the site that include residential, retail, and commercial/industrial uses would serve to reduce vehicle miles traveled overall in the County. The project is consistent with the County General Plan's Thriving Communities goals. The purpose of the development is to provide residential uses in the area. The current zoning would require workers to travel longer distances rather than providing the opportunity to live and work in the community. While this reduction in distance cannot be quantified, part of the goal of providing these uses at the site is to provide local residential uses in the Otay Mesa area.

As part of its attainment planning process, the San Diego Air Pollution Control District proposes and adopts Rules and Regulations to control air pollutants to demonstrate further progress toward attainment as part of the RAQS and SIP. The Project also will comply with any applicable rules and regulations that have been adopted as part of the RAQS and SIP by the San Diego Air Pollution Control District.

The project is proposing a Specific Plan Amendment that is consistent with the County's General Plan for Village Development. The Village category identifies areas where a higher intensity and a wide range of land uses are established or have been planned. Ideally, a Village would reflect a development pattern that is characterized as compact, higher density development that is located within walking distance of commercial services, employment centers, civic uses, and transit (when feasible). The project will provide local residential, employment, and commercial uses in an existing employment center. Through providing local residential uses, the project will serve to reduce the vehicle miles traveled within the region. Because the project is proposing development that is consistent with the density within the General Plan and would not allow additional vehicle trips, the project would not conflict with or obstruct implementation of the RAQS or SIP.

4.1.3 Design Considerations

Because the project would not conflict with or obstruct implementation of the RAQS and SIP, no mitigation is required.

4.1.4 Conclusions

As discussed above, the project is proposing a rezone to allow residential uses at the site. The project would, however, be consistent with the density within the General Plan and would not allow additional vehicle trips. The planned land use change would meet the County's requirements for constructing mixed-use developments, which would reduce, rather than increase, vehicle miles traveled. The project will process a Specific Plan Amendment and zoning change. For these reasons, the project will be consistent with the allowable land use at the site and would not conflict with or obstruct implementation of the RAQS or SIP, the impacts are less than significant.

4.2 Conformance to Federal and State Ambient Air Quality Standards

The project will result in a significant impact to air quality if:

The project would result in emissions that would violate any air quality standard or contribute substantially to an existing or projected air quality violation.

The project will result in emissions that exceed 250 pounds per day of NO_x, or 75 pounds per day of VOCs.

The project will result in emissions of carbon monoxide that when totaled with the ambient concentrations will exceed a 1-hour concentration of 20 parts per million (ppm) or an 8-hour average of 9 ppm.

The project will result in emissions of PM_{2.5} that will exceed 55 pounds per day.

The project will result in emissions of PM₁₀ that exceed 100 pounds per day and increase the ambient PM₁₀ concentration by 5 micrograms per cubic meter (5.0 µg/m³) or greater at the maximum exposed individual.

4.2.1 Construction Impacts

4.2.1.1 Guidelines for the Determination of Significance

Based on the County of San Diego Guidelines (County of San Diego 2007), construction impacts would be potentially significant if they exceed the quantitative screening-level thresholds for

attainment pollutants (NO₂, SO₂, and CO), and would result in a significant impact if they exceed the screening-level thresholds for nonattainment pollutants (ozone precursors and particulate matter).

4.2.1.2 Significance of Impacts Prior to Mitigation

A specific schedule for project construction is not known at this time. It was assumed that the project could be built out over a period of 15 years starting in 2018, with project buildout complete in 2032. Emissions from the construction phase of the project were estimated using the CalEEMod Model, Version 2013.2.2 (ENVIRON 2013). Project grading would be completed in a single phase prior to commencement of construction of buildings; grading would not be conducted for each phase separately. It is estimated that grading will involve a total of 1,350,000 cubic yards of earthmoving, with the cut and fill balanced on site. Accordingly, transport distances were reduced within the CalEEMod model to 0.5 miles. Infrastructure will be constructed at each site development phase and has been included in the CalEEMod modeling analysis under building construction and paving; equipment used within the analysis includes backhoe/loaders that would be used to install infrastructure and utilities as well as paving.

CalEEMod relies on the total area of the site and estimates site disturbance based on the maximum acres that can be graded given the construction equipment input in an 8-hour day. To account for standard dust control measures within the CalEEMod Model, it was assumed that watering three times day would reduce particulate matter emissions by 61%, and that speeds on unpaved surfaces would be reduced to 15 mph. No other mitigation measures were taken into account in the model.

Architectural coatings would be required to meet the requirements of SDAPCD Rule 67.0.1, which was adopted in June 2015 and will go into effect on January 1, 2016. Rule 67.0.1 limits VOC content to 100 g/l for exterior paints and 50 g/l for interior paints. This rule was taken into account in the CalEEMod Model. It was also assumed, based on County T-BACT requirements, that all Tier 3 equipment would be used during construction.

Table 4 provides a summary of the assumed construction phases for project construction. Table 5 presents a summary of the maximum daily emission estimates for construction of the East Otay Mesa Specific Plan Amendment. Refer to Attachment A for detailed CalEEMod Model outputs.

Table 4¹
Assumed Construction Schedule

Project Element	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027	TOTAL
Technology Park (square feet)		95,625	95,625	95,625	95,625	95,625	95,625	95,625	47,813	47,812	765,000 sq. ft.
Residential (units)	875	697	337	837	312	100					3,158 units
Retail (square feet)						78,000					78,000 sq. ft.
Park (acres)	8	10		9							27 acres

¹This table provides an assumed phasing for the purpose of the air quality analysis to address emissions from construction on a programmatic level. Emissions are calculated and disclosed on this basis.

Construction Year/Phase	VOC (lbs/day)	NO_x (lbs/day)	CO (lbs/day)	SO₂ (lbs/day)	PM₁₀ (lbs/day)	PM_{2.5} (lbs/day)
Site Preparation (2016)	5.14	54.71	41.91	0.05	10.75	6.68
Grading (2016)	19.11	179.41	183.22	0.16	16.05	11.36
Total 2016	24.25	234.12	225.13	0.21	26.80	18.04
Grading (2017)	17.93	167.23	174.58	0.16	15.40	10.82
2018	73.86	58.67	108.63	0.22	11.78	5.29
2019	70.55	59.70	106.54	0.22	11.49	5.30
2020	27.52	46.29	72.54	0.13	6.01	3.55
2021	76.95	56.72	105.48	0.23	12.31	5.49
2022	26.25	48.53	74.70	0.14	6.01	3.70
2023	16.60	47.52	69.16	0.12	4.69	3.36
2024	6.54	44.66	61.50	0.10	3.46	2.94
2025	6.53	44.65	61.39	0.10	3.46	2.94
2026	4.32	44.30	60.15	0.09	3.20	2.87
2027	4.32	44.29	60.10	0.09	3.20	2.87
Maximum Daily Emissions	76.95	234.12	225.13	0.22	26.80	18.04
Screening Level Thresholds (SLT)	75	250	550	250	100	55
<i>Significant Impact?</i>	Yes	No	No	No	No	No

As shown in Table 5, with implementation of dust control measures (watering three times daily, cleaning paved roads, and reducing speeds on unpaved surfaced to 15 mph), the maximum simultaneous emissions are below the screening-level thresholds for all criteria pollutants except VOCs, which are above the threshold in 2021.

4.2.1.3 Design Considerations

Project construction would employ dust control measures to reduce impacts as feasible. Dust control measures would include watering the site at least three times daily during active grading, and reducing vehicle speeds on unpaved surfaces to 15 mph, and cleaning paved roads, which was assumed to be 25% effective in reducing PM emissions (SCAQMD 1999). In addition, the project would utilize low-VOC coatings in accordance with APCD Rule 67.0.1 requirements. The project

would reduce emissions to the extent feasible. The emissions are mainly attributable to application of architectural coatings. Because the coatings will meet SDAPCD low-VOC requirements, there are no additional mitigation measures that would reduce VOC emissions to less than significant levels.

4.2.1.4 Conclusions

Project criteria pollutants emissions during construction would be less than significant for all pollutants except VOCs. This impact would be significant and unmitigated, but would be temporary.

4.2.2 Operational Impacts

4.2.2.1 Guidelines for the Determination of Significance

Based on the County of San Diego Guidelines (County of San Diego 2007), operational impacts would be potentially significant if they exceed the quantitative screening-level thresholds for attainment pollutants (NO₂, SO₂, and CO), and would result in a significant impact if they exceed the screening-level thresholds for nonattainment pollutants (ozone precursors and particulate matter).

4.2.2.2 Significance of Impacts Prior to Mitigation

The main operational impacts associated with the Project would include impacts associated with traffic; additional emissions would be associated with area sources such as energy use and landscaping.

Project-generated traffic was addressed in the Traffic Impact Analysis for the Otay Mesa Specific Plan Amendment (Linscott, Law & Greenspan 2015). Based on the Traffic Impact Analysis, under Buildout conditions the total trip generation would be 37,916 average daily trips (ADT) without accounting for a mixed use reduction. The mixed use reduction assumed by the traffic analysis is

10%; however, this reduction was not taken into account in the analysis. Project operational emissions were estimated using the CalEEMod Model, Version 2013.2.2, conservatively assuming an operational year of 2025; in reality, full buildout is not anticipated until approximately 2032.

Emissions were calculated for area sources (including architectural coatings for maintenance purposes, consumer products, landscaping, and fireplace use – all natural gas fireplaces assumed), energy use (natural gas use), and vehicles. Emissions were calculated for both summer and winter conditions, as well as for annual operations.

The main operational impacts associated with the Project would include impacts associated with traffic; additional emissions would be associated with area sources such as energy use and landscaping. Emissions are attributable to the following sources:

- Vehicles from trips generated by the project. Trip generation rates were obtained from the Traffic Impact Study (Linscott, Law and Greenspan 2015).
- Architectural coatings application for maintenance purposes
- Consumer products use
- Fireplace use – all fireplaces are assumed to be natural gas
- Landscaping equipment use
- Energy use – natural gas

The results of the emission calculations, in lbs/day and tons/year, are summarized in Table 6 for buildout conditions, along with emissions associated with area sources and a comparison with the County of San Diego significance criteria. The CalEEMod outputs are presented in Appendix A.

Table 6						
Total Operational Emissions

<i>Above Screening-Level Thresholds?</i>	<i>Yes</i>	<i>No</i>	<i>Yes</i>	<i>No</i>	<i>Yes</i>	<i>No</i>

Emissions associated with the project are above the County’s screening-level thresholds for the following pollutants:

- VOCs, CO, PM₁₀, and PM_{2.5} (daily)
- VOCs, CO, and PM₁₀ (annual)

Because vehicular emissions decrease over time with phase-out of older vehicles and implementation of increasingly stringent emission controls, future emissions would decrease from 2025 onward. However, emissions would remain above the significance thresholds due to the use of fireplaces and consumer products, as well as vehicle travel.

The project has incorporated design features such as a mix of uses and provides local-serving retail for residential and business land uses currently located in the project area. Because the VOC emissions associated with area sources are mainly attributable to the use of consumer products in residential dwellings, and because the applicant does not have the ability to regulate consumer products use, the emissions from area sources would not be mitigable by the applicant. According to the Traffic Impact Analysis, the mix of uses would result in a reduction in VMT, and associated VOCs, of 10%; according to the CAPCOA reference *Quantifying Greenhouse Gas Reduction Measures* (CAPCOA 2010), the reduction based on the land use index calculation is 15.04%. The project would not include conventional fireplaces and would be equipped with natural gas fireplaces only. Furthermore, because the project is consistent with the General Plan's Village land use element, and would provide residential uses in an employment center, the project would ultimately reduce VOCs from vehicles within the region by reducing VMTs from travel to employment. There are no additional mitigation measures that would reduce emissions below a level of significance. Future vehicle emissions would decrease due to increasingly stringent air quality standards and phaseout of older vehicles.

Operational emissions would exceed the County's screening-level thresholds for VOCs, CO, PM₁₀, and PM_{2.5}. Most of the emissions are attributable to vehicle trips generated by the project; however, the VOC emissions are above the threshold mainly due to the use of consumer products in the residential development. The consumer products use is associated with residential uses, and the applicant cannot mandate that residents not use consumer products that contain VOCs. Because the project is providing residential uses within the Otay Mesa Specific Plan Area, it is likely that overall within the region the VMT would be reduced due to the availability of nearby residences to workplaces. However, for the purpose of this analysis, the project would result in a significant impact.

4.2.2.3 Mitigation Measures and Design Considerations

There are no additional mitigation measures beyond the project design features discussed above that would reduce the impacts associated with the project to below a level of significance. Because

the project is consistent with the County General Plan's Thriving Communities Goal, and provides a mix of uses in the Otay Mesa Area, the project would likely reduce, rather than increase, the VMT required to travel to places of employment in the Specific Plan Area.

As each portion of the project is developed, the project will be required to undergo a plan review. At that time, there may be additional measures that would be identified to reduce emissions, including future regulations governing consumer products and future technical advancements that are not foreseeable at this time.

4.2.2.4 Conclusions

Emissions of VOCs, CO, PM₁₀, and PM_{2.5} (daily) and VOCs, CO, and PM₁₀ (annual) would exceed the County's screening-level thresholds for operations. Impacts would therefore be significant and unmitigated.

4.3 Cumulatively Considerable Net Increase of Criteria Pollutants

The project will result in a significant impact to air quality if:

The project will result in a cumulatively considerable net increase of any criteria pollutant for which the San Diego Air Basin is non-attainment under an applicable Federal or State Ambient Air Quality Standard (including emissions which exceed the SLTs for ozone precursors listed in Table 5 of the Guidelines).

4.3.1 Construction Impacts

4.3.1.1 Guidelines for the Determination of Significance

Based on the County of San Diego guidelines (County of San Diego 2007), a project would result in a cumulatively significant impact if the project results in a significant contribution to the cumulative increase in pollutants for which the SDAB is listed as nonattainment for the CAAQS

and NAAQS. As discussed in Section 2.0, the SDAB is considered a nonattainment area for the NAAQS for ozone and the CAAQS for ozone, PM₁₀, and PM_{2.5}.

Cumulatively considerable net increases during the construction phase would typically happen if two or more projects near each other are simultaneously constructing projects. A project that has a significant direct impact on air quality with regard to emissions of PM₁₀, PM_{2.5}, NO_x, or VOCs during construction would also have a significant cumulatively considerably net increase. In the event direct impacts from a proposed project are less than significant, a project may still have a cumulatively considerable impact on air quality if the emissions of concern from the proposed project, in combination with the emissions of concern from other proposed projects or reasonably foreseeable future projects within a proximity relevant to the pollutants of concern, are in excess of the guidelines identified in Section 3.0.

4.3.1.2 Significance of Impacts Prior to Mitigation

The construction emissions would not exceed the County's screening-level thresholds for nonattainment pollutants except VOCs during one year of construction (NO_x, PM₁₀, or PM_{2.5}). Construction emissions are anticipated within the San Diego Air Basin SIP and within the ARB's regional air emissions budgets, and are below the significance thresholds for all pollutants. Because emissions are below the screening-level thresholds for construction, emissions would not be cumulatively considerable on a regional basis.

In general, impacts associated with fugitive dust from construction are generally localized and would affect the area within approximately one-quarter mile of the project site. To evaluate the potential for cumulative impacts from grading at the East Otay Mesa Specific Plan project site, the following equation was used (Desert Research Institute 1996), which is utilized in the SCAQMD's Localized Significance Threshold Methodology (SCAQMD 2003) to evaluate localized PM₁₀ impacts:

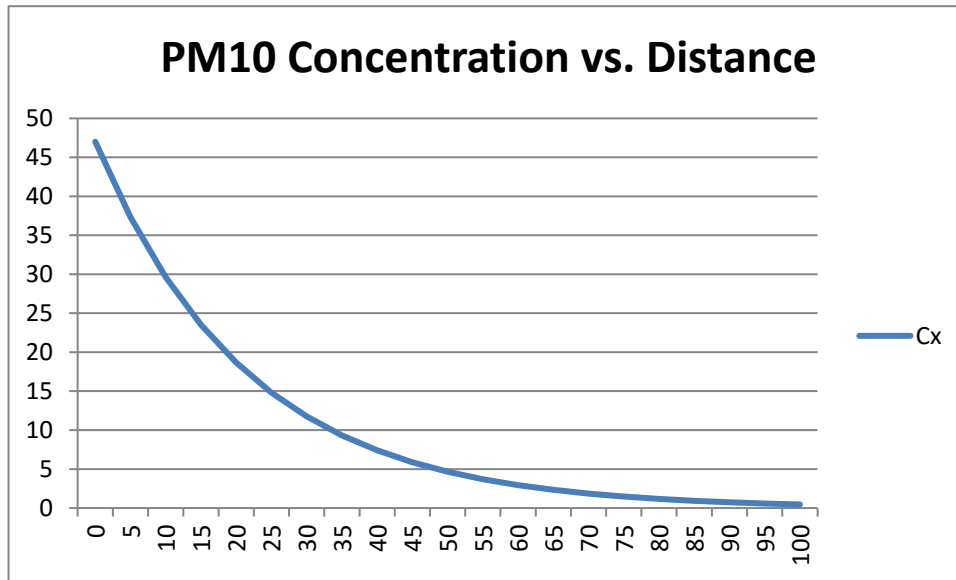

$$C_x = 0.9403 C_0 e^{-0.0462X}$$

Where C_x = predicted PM_{10} concentration at X meters from the fenceline;
 C_0 = PM_{10} concentration at the fenceline;
 e = natural logarithm; and
 X = distance in meters from the fenceline.

Conservatively assuming C_0 equals the 24-hour ambient air quality standard of $50 \mu\text{g}/\text{m}^3$, fugitive PM_{10} concentrations would decrease with distance from the fenceline. As shown in the chart below, by 100 meters (approximately 330 feet) from the project boundary, the concentration of PM_{10} would decrease by 99 percent.

There are two developments located within 100 meters of the project site: California Crossings to the west of the site adjacent to the SR-125 freeway, and the Rabago Tentative Map project to the east of the site. The California Crossings project is most likely to be completed with construction by the time construction commences at the East Otay Mesa Specific Plan area; therefore, construction impacts would not combine to become cumulatively considerable.

It is likely that construction would occur at the Rabago Tentative Map site during the 15-year construction period proposed for the East Otay Mesa Specific Plan Amendment Project given the duration of the project and the proximity to the site. However, with the removal of the residential receptors located on that site, there would be no sensitive receptors that would be exposed to elevated particulate concentrations.

As stated by the California Natural Resources Agency (CNRA 2009), there is no “one molecule rule” in CEQA. In other words, the courts have ruled that addition of “one molecule” of pollutants does not constitute a cumulative impact for either localized or regional pollutants. While emissions of VOCs are above the County’s threshold for construction emissions during Year 4 of construction, this is a temporary impact associated with application of architectural coatings. Emission of VOCs would be below the threshold for all other years of construction, and would not result in a long-term impact. For that reason, impacts from VOCs are not considered cumulatively considerable.

Because the project’s construction emissions are below the County’s significance thresholds, and because localized impacts would not affect a substantial number of receptors, impacts would be less than cumulatively considerable.

4.3.1.3 Design Considerations

As no cumulatively considerable impact has been identified for the project, no design considerations are required.

4.3.1.4 Conclusions

Impacts from construction would be less than significant.

4.3.2 Operational Impacts

4.3.2.1 Guidelines for the Determination of Significance

As discussed above, based on the County of San Diego guidelines (County of San Diego 2007), a project would result in a cumulatively significant impact if the project results in a significant contribution to the cumulative increase in NO_x, VOCs, PM₁₀, and PM_{2.5}. In accordance with the guidelines, a project that does not conform to the RAQS and/or has a significant direct impact on air quality with regard to operational emissions of nonattainment pollutants would also have a cumulatively considerable net increase. Also, projects that cause road intersections to operate at or below a LOS E and create a CO “hot spot” create a cumulatively considerable net increase of CO.

4.3.2.2 Significance of Impacts Prior to Mitigation

Emissions of nonattainment pollutants VOCs, CO, PM₁₀, and PM_{2.5} (daily) and VOCs, CO, and PM₁₀ (annual) would exceed the County’s screening-level thresholds for operations. The project would therefore result in a cumulatively considerable net increase in nonattainment pollutants. The evaluation of CO “hot spots” (presented in Section 4.4) took into account cumulative traffic at the intersections, and determined that no exceedance of the CO standard would result from cumulative traffic.

Operational emissions are below the significance thresholds for all pollutants except VOCs. Emissions of VOCs are mainly attributable to consumer products use in residences and vehicles. As discussed in Section 4.2.2, emissions of VOCs attributable to vehicles would be lower due to the provision of a mix of uses (employment, residential, and commercial) within the Specific Plan Area. Emissions of VOCs attributable to consumer products use is not within the control of the

applicant. Because the emissions of VOCs exceed the significance threshold, emissions of VOCs would be cumulatively considerable on a regional basis.

4.3.2.3 Mitigation Measures and Design Considerations

As discussed in Section 4.2.2.3, there are no additional mitigation measures that would reduce the impacts associated with the project to below a level of significance. The applicant cannot implement measures to reduce consumer products use or regulate the types of consumer products that would be used.

Because the project is consistent with the County General Plan's Thriving Communities Goal, and provides a mix of uses in the Otay Mesa Area, the project would likely reduce, rather than increase, the VMT required to travel to places of employment in the Specific Plan Area.

As each portion of the project is developed, the project will be required to undergo a plan review. At that time, there may be additional measures that would be identified to reduce emissions.

4.3.2.4 Conclusions

Emissions of nonattainment pollutants would exceed the County's screening-level thresholds for nonattainment pollutants. Therefore, the project would result in a cumulatively considerable impact.

4.4 Impacts to Sensitive Receptors

4.4.1 Guidelines for the Determination of Significance

The project will result in a significant impact to air quality if:

The project will expose sensitive receptors to substantial pollutant concentrations.

Air quality regulators typically define “sensitive receptors” as schools, hospitals, resident care facilities, day-care centers, or other facilities that may house individuals with health conditions that would be adversely impacted by changes in air quality. However, for the purpose of CEQA analysis, the County of San Diego definition of “sensitive receptors” includes residences (County of San Diego 2007). The two pollutants of main concern for development projects are CO and diesel particulate matter.

CO Hot Spots. Projects involving traffic impacts may result in the formation of locally high concentrations of CO, known as CO “hot spots.” To verify that the project would not cause or contribute to a violation of the CO standard, a screening evaluation of the potential for CO “hot spots” was conducted. The Traffic Impact Analysis (Linscott, Law & Greenspan 2015) evaluated whether or not there would be a decrease in the level of service at the roadways and/or intersections affected by the Project. The potential for CO “hot spots” was evaluated based on the results of the Traffic Impact Analysis. The Caltrans ITS Transportation Project-Level Carbon Monoxide Protocol (Caltrans 1998) should be followed to determine whether a CO “hot spot” is likely to form due to Project-generated traffic. In accordance with the Protocol, CO “hot spots” are typically evaluated when (a) the level of service (LOS) of an intersection or roadway decreases to a LOS E or worse; (b) signalization and/or channelization is added to an intersection; and (c) sensitive receptors such as residences, commercial developments, schools, hospitals, etc. are located in the vicinity of the affected intersection or roadway segment.

Toxic Air Contaminants. The primary toxic air contaminant emissions of concern for impacts to sensitive receptors is diesel particulate matter. While there is a potential that the Technology Business Park uses could utilize toxic air contaminants, there is no way to speculate on the types or amounts of substances that could be released. As discussed in Section 4.0, a site plan review will be conducted on each specific area as it is developed, when specific uses would be better understood and use of toxic air contaminants could be addressed at that time. Emissions from stationary sources would be subject to the requirements of SDAPCD Rule 1200, and would therefore be required to obtain an air permit and to demonstration through a health risk assessment that the source’s operational emissions would not result in a significant impact to sensitive

receptors. This analysis therefore focuses on diesel particulate matter associated with construction sources.

The project does not include warehousing and would therefore not generate the truck trips associated with those types of uses, which are not allowed within the Specific Plan Area. Uses in the Technology Business Park would be limited to light industrial and custom manufacturing. These uses would be confined to the Technology Business Park uses and would not be mixed with the residential uses. While there could also be particulate matter from truck traffic on the site during operations, it is anticipated that the amount of truck traffic during operations at full buildout would be lower than the emissions during construction, because no truck distribution facilities are allowed within the project.

4.4.2 Significance of Impacts Prior to Mitigation

CO Hot Spots. The Traffic Impact Analysis evaluated 23 intersections in the project vicinity to evaluate the potential for direct impacts. Based on the Traffic Impact Analysis, significant intersection impacts were identified for the following intersections:

Existing plus Project

Otay Mesa Road and La Media Road
Otay Mesa Road and Harvest Road
Otay Mesa Road and Sanyo Road
Otay Mesa Road and Vann Centre Boulevard

Year 2020 Cumulative Conditions

Otay Mesa Road and La Media Road
Otay Mesa Road and Harvest Road
Otay Mesa Road and Sanyo Road
Otay Mesa Road and Vann Centre Boulevard
Airway Road and Sanyo Road
Airway Road and Paseo de las Americas
Siempra Viva Road and Paseo de las Americas

Siempre Viva Road and Enrico Fermi Drive

To evaluate the potential for CO “hot spots” at this intersection, the procedures in the Caltrans ITS Transportation Project-Level Carbon Monoxide Protocol (Caltrans 1998) were used. As recommended in the Protocol, CALINE4 modeling was conducted for the intersections identified above for the scenarios with and without Project traffic. Modeling was conducted based on the guidance in Appendix B of the Protocol to calculate maximum predicted 1-hour CO concentrations. Predicted 1-hour CO concentrations were then scaled to evaluate maximum predicted 8-hour CO concentrations using the recommended scaling factor of 0.7 for urban locations.

Inputs to the CALINE4 model were obtained from the Traffic Impact Analysis. As recommended in the Protocol, receptors were located at locations that were approximately 3 meters from the mixing zone, and at a height of 1.8 meters. Average approach and departure speeds were assumed to be 5 mph to account for congestion at the intersection and provide a worst case estimate of emissions. Emission factors were estimated from the EMFAC2014 Model.

In accordance with the Caltrans ITS Transportation Project-Level Carbon Monoxide Protocol, it is also necessary to estimate future background CO concentrations in the project vicinity to determine the potential impact plus background and evaluate the potential for CO “hot spots” due to the project. As a conservative estimate of background CO concentrations, the existing maximum 1-hour background concentration of CO that was measured at the San Diego monitoring station for the period 2012 to 2014 of 2.7 ppm was used to represent future maximum background 1-hour CO concentrations. This is a conservative assumption, as the monitoring station is located in downtown San Diego where there is more congestion than in the project area. The existing maximum 8-hour background concentration of CO that was measured at the San Diego monitoring station during the period from 2012 to 2014 of 1.9 ppm was also used to provide a conservative estimate of the maximum 8-hour background concentrations in the project vicinity. CO concentrations in the future may be lower as inspection and maintenance programs and more stringent emission controls are placed on vehicles.

The CALINE4 model outputs are provided in Appendix A of this report. Table 7 presents a summary of the predicted CO concentrations (impact plus background) for the intersections evaluated. As shown in Table 10, the predicted CO concentrations would be substantially below the 1-hour and 8-hour NAAQS and CAAQS for CO shown in Table 1 of this report. Therefore, no exceedances of the CO standard are predicted, and the project would not cause or contribute to a violation of this air quality standard. The traffic would therefore not expose sensitive receptors to substantial CO concentrations.

Toxic Air Contaminants. The project would result in emissions of diesel particulate matter during construction activities and also due to truck traffic associated with project operations. To evaluate whether project construction could pose a significant impact to nearby sensitive receptors, an evaluation of diesel exhaust particulate matter was conducted. Diesel exhaust particulate matter is known to the state of California as carcinogenic compounds. The risks associated with exposure to substances with carcinogenic effects are typically evaluated based on a lifetime of chronic exposure, which is defined in the California Office of Environmental Health Hazard Assessment (OEHHA) guidelines, *The Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments* (OEHHA 2003) as 24 hours per day, 7 days per week, 365 days per year, for 70 years. Diesel exhaust particulate matter would be emitted during construction due to the operation of heavy equipment at the site. Because diesel exhaust particulate matter is considered to be carcinogenic, long-term exposure to diesel exhaust emissions have the potential to result in adverse health impacts.

The purpose of this analysis is to provide a program-level evaluation of potential toxic air contaminant impacts on existing receptors in the project area. As discussed in this document, each development area will be required to conduct a site plan review. At that time, it can be determined if (a) the sensitive receptors identified within the existing impact area are still present; (b) there are new sensitive receptors developed as part of the Specific Plan Area that could be exposed to toxic air contaminants; and (c) whether there are any specific toxic air contaminant emissions identified as part of the development itself.

To assess whether there is a potential for a significant impact associated with exposure to diesel exhaust particulate matter, a health risk evaluation was conducted on the particulate emissions. The amount of diesel particulate varies with the project schedule and construction phasing; the

project is anticipated to be constructed over a period of 17 years starting in 2016 and ending in 2032. The on-site construction heavy equipment diesel particulate emissions calculated by the CalEEMod Model for each year are as follows:

Construction Phase	Tons of Diesel Particulate¹
Site Preparation	0.1763
Grading (2016)	0.5509
Grading (2017)	0.6124
2018	0.3478
2019	0.3787
2020	0.3395
2021	0.3687
2022	0.3646
2023	0.2882
2024	0.2466
2025	0.2122
2026	0.2122
2027	0.2122

¹The CalEEMod model was run using Tier 3 equipment; however, for 2023 and beyond, the default equipment fleet assumes Tier 3 and Tier 4 equipment. Default equipment emissions were therefore used in this HRA.

The construction heavy equipment sources were represented as a series of 266 volume sources placed at the site. The sources were placed throughout the site, because it is not known where specific activities would occur at various construction phases and times. Emissions were allocated to each source based on the estimated emission rates for diesel particulate during construction.

The nearest existing receptors were located based on the site map and aerial photographs for the project area. The only sensitive receptors identified in the project vicinity are three residences located on Otay Mesa Road to the southeast of the site. These residential dwellings are part of a pending tentative map development, which would result in the removal of the residences. For the purpose of this analysis, however, it was assumed that these residential dwellings would be occupied for a period of five years during construction of the East Otay Mesa Specific Plan Amendment. In the event that the residences are still present at the time of individual site plan

reviews, further analysis may be warranted to evaluate potential risks to the existing residences. The site plan review process may also identify circumstances where a review of impacts to residences within the development from future construction activities is warranted.

The risk evaluation was conducted to assess the potential for an unacceptable risk at these existing receptors due to exposure to diesel particulate emissions from heavy construction equipment during construction. The residential receptors identified are the closest residences. No other sensitive receptors are located in the project vicinity within the one-mile distance identified in this analysis.

The U.S. EPA's approved air dispersion model, AERMOD (U.S. EPA 2014), was used to estimate the downwind impacts at the closest receptors to the construction site. The model was run using preprocessed meteorological data from the Otay Mesa surface meteorological monitoring station provided by the San Diego Air Pollution Control District. Risks were estimated using the Office of Environmental Health Hazard Assessment (OEHHA)'s March 2015 *Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments*.

OEHHA recommends exposure assumptions to calculate potential health risks, including adjustments to account for childhood exposure, to calculate excess cancer risks. The guidance recommends a 30-year exposure period for use as the basis for estimating cancer risk at residential receptors. Risks are calculated on the basis of the 30-year exposure period, accounting for childhood sensitivity, using the OEHHA-recommended age sensitivity factors (ASFs) to take into account the increased sensitivity to carcinogens during early-in-life exposure. In addition, high-end breathing rates recommended by OEHHA were used to provide a conservative estimate of risk. The residential exposure scenario assumes that an individual is present at the same location 24 hours per day, 350 days per year, for a 30-year period that includes childhood. Table 9 presents the exposure factors used in this analysis to evaluate potential risks from the construction of the project.

Table 9 Risk Assessment Exposure Factors					
Risk Calculation Parameters	Breathing Rate/Body Weight. L/kg-day	Age Sensitivity Factor	Exposure Duration, years	Averaging Time, years	Fraction of Time at Home
Time Period of Exposure, years	High End BR/BW	ASF	ED	AT	FAH
3rd Trimester	361	10	0.25	70	0.85
0<2	1090	10	2	70	0.85
2<16	745	3	14	70	0.72
16<30	335	1	14	70	0.73
Cancer Potency Factors					
Diesel Particulate	1.10E+00(mg/kg-day) ⁻¹				

Source: OEHHA 2015

It should be understood that the averaging time for cancer risk (AT) is not the same as the exposure duration (ED). According to the USEPA (USEPA 2015), for quantifying cancer risk, "lifetime" exposure employs an averaging time of 70 years (i.e., 70 years × 365 days/year). This term specifies the length of time over which the average dose is calculated. According to the USEPA (USEPA 2009), the estimation of an exposure concentration when assessing cancer risks characterized by an inhalation unit risk involves the concentration in air measured at an exposure point at a site as well as scenario-specific parameters, such as the exposure duration and frequency. The exposure concentration typically takes the form of a concentration in air that is time-weighted over the duration of exposure and incorporates information on activity patterns for the specific site or the use of professional judgment. However, the cancer slope factor used to calculate the risk is always based on an averaging time of 70 years, which represent a lifetime of exposure.

Risks are calculated on the basis of a 30-year exposure scenario as recommended by OEHHA. Because the risk calculation is based on 30 years (10,950 days) of exposure for 24 hours per day, 350 days per year, the results of the analysis were scaled to account for exposure for the duration of exposure assumed at the nearest receptors (5 years), as shown in the example calculation below.

$$\text{Risk} = \text{Excess cancer risk for 30 years} \times (1,825 \text{ days}/10,950 \text{ days}).$$

The maximum annual concentration at an offsite receptor is $0.04599 \mu\text{g}/\text{m}^3$. According to OEHHA (OEHHA 2015), cancer and chronic risks are calculated based on air dispersion modeling using meteorological data that is sufficient to estimate long-term exposure concentrations. To be representative, meteorological data must be of sufficient duration to define the range of sequential atmospheric conditions anticipated at a site. As a minimum, one full year of on-site meteorological data is necessary to prescribe this time series. OEHHA recommends that annual average concentrations be used in calculating cancer and chronic risks. The maximum concentration was used to calculate risk based on on-site diesel particulate emissions. The risk predicted using this equation is then compared to a risk level of 10 in 1 million, which is the County's significance threshold with implementation of Toxics-Best Available Control Technology (T-BACT). If the risk predicted using this equation is above 10 in 1 million, the risk would be above the County of San Diego's significance threshold. Based on the above equation, the maximum excess cancer risk predicted at the nearest residential receptor would be 5.23 in a million. This value is below the County of San Diego's significance threshold of 10 in 1 million with implementation of T-BACT.

In addition, the chronic hazard was calculated based on the potential for adverse non-cancer health effects associated with exposure to diesel particulate matter. It should be noted that cancer risks generally drive the potential risk assessment for diesel particulate matter. The chronic reference exposure level (REL) for diesel particulate matter is $5 \mu\text{g}/\text{m}^3$. The hazard quotient is calculated by dividing the downwind concentration of diesel particulate matter by the REL. The chronic hazard quotient for construction of the East Otay Mesa Specific Plan Amendment would therefore be 0.009198, which is below the County's significance hazard threshold of 1.0.

T-BACT will include the following measure:

In accordance with County of San Diego Planning and Development Services requirements, the project will require the construction fleet to use any combination of diesel catalytic converters, diesel oxidation catalysts, diesel particulate filters and/or ARB certified Tier III, or IV equipment. With this requirement, the project would mitigate emissions to the extent feasible. At this time, it

is not known what the specific makeup of the construction fleet would be; however, future construction fleets would be more likely to be comprised of higher tier equipment. As discussed throughout this analysis, each portion of the development will be required to undergo a development review; additional measures may be applicable at the time of the review for various construction phases.

The risks associated with exposure to diesel particulate from construction of the project are therefore not significant. Results of the risk evaluation and risk calculations are included in Appendix B.

Vehicular traffic may result in emissions of toxic air contaminants (TACs). Minor amounts of TACs are found in light-duty vehicle exhaust; however, the main source of on-road TACs is from diesel-powered heavy-duty trucks. As discussed above, however, the three offsite residences would eventually be removed upon development of the adjacent tentative map area. Accordingly, it is anticipated that truck traffic attributable to the project's operations would not result in an impact to these sensitive receptors.

Because it is not known exactly what types of facilities would be located at the Technology Park, and because the specific development scenario for residences versus Technology Park Uses are not known at this time, it is not possible to evaluate risks at the on-site residences. However, as specific planning areas are developed, they will be required to undergo further review, which may include preparation of a site-specific health risk assessment as warranted to identify potential TAC emissions from proposed uses as well as additional sensitive receptors that may be developed as part of this project.

4.4.3 Mitigation Measures and Design Considerations

Because impacts to sensitive receptors from diesel particulate emissions would be less than significant, no additional mitigation measures are required.

4.4.4 Conclusions

Impacts to sensitive receptors would be less than significant.

4.5 Odor Impacts

4.5.1 Guidelines for the Determination of Significance

The project will result in a significant impact to air quality if:

The project which is not an agricultural, commercial or an industrial activity subject to SDAPCD standards, as a result of implementation, will either generate objectionable odors or place sensitive receptors next to existing objectionable odors, which will affect a considerable number of persons or the public.

4.5.2 Significance of Impacts Prior to Mitigation

Project construction could result in minor amounts of odor compounds associated with diesel heavy equipment exhaust. Because the construction equipment would be operating at various locations throughout the construction site, and because any operation that would occur in the vicinity of existing receptors would be temporary, impacts associated with odors during construction are therefore not considered significant.

During construction, diesel equipment operating at the site may generate some nuisance odors; however, due to the distance of sensitive receptors to the project site and the temporary nature of construction, odors associated with project construction would not be significant.

According to the SCAQMD (SCAQMD 1999), the following sources are considered odor sources:

- Agriculture (farming and livestock)
- Wastewater treatment plants
- Food processing plants
- Chemical plants
- Composting
- Refineries
- Landfills
- Dairies
- Fiberglass molding.

The project will not include any of these odor sources at the site. The project is designed to provide a mix of residential, employment, and retail uses. Within the Technology Business Park, the uses would include light manufacturing and technology uses that would not include any of the odor-generating land uses listed above. The Specific Plan Area will not allow any of the types of land uses listed above that are identified as potential sources of objectionable odors affected a substantial number of people. Furthermore, as discussed throughout this analysis, as developed each project will be required to undergo additional CEQA review, and specific uses that are identified can be evaluated for potential odor impacts at the time of review. The project is therefore not considered a source of objectionable odors from operations.

4.5.3 Design Considerations

Because the project would not generate objectionable odors or place sensitive receptors near existing odor sources that would affect a considerable number of persons or the public, no additional design considerations are required.

4.5.4 Conclusions

Due to the nature of the project as a mix of residential, employment, and retail uses that will not include objectionable odor sources, the project is not identified as a specific source of nuisance odors. Odor impacts are therefore less than significant.

5.0 SUMMARY OF RECOMMENDED DESIGN FEATURES, IMPACTS, AND MITIGATION

In summary, the proposed project would result in emissions of air pollutants for both the construction phase and operational phase of the project. The air quality impact analysis evaluated the following air quality issues, and made the following conclusions:

The project will conflict with or obstruct the implementation of the San Diego Regional Air Quality Strategy (RAQS) and/or applicable portions of the State Implementation Plan (SIP).

The project will provide a mix of uses and is consistent with the goals of the County General Plan's Thriving Communities Goals. The project would be consistent with the intensity scale in the General Plan and would not result in additional vehicle trips above the levels anticipated in the General Plan. The project would not differ from the analysis included within the RAQS and SIP to demonstrate attainment. The project would therefore not conflict with or obstruct implementation of the RAQS and SIP.

The project would result in emissions that would violate any air quality standard or contribute substantially to an existing or projected air quality violation.

The project will result in emissions that exceed 250 pounds per day of NO_x, or 75 pounds per day of VOCs.

The project will result in emissions of carbon monoxide that when totaled with the ambient concentrations will exceed a 1-hour concentration of 20 parts per million (ppm) or an 8-hour average of 9 ppm.

The project will result in emissions of PM_{2.5} that will exceed 55 pounds per day.

The project will result in emissions of PM₁₀ that exceed 100 pounds per day and increase the ambient PM₁₀ concentration by 5 micrograms per cubic meter (5.0 µg/m³) or greater at the maximum exposed individual.

Both construction and operational emissions were evaluated to address these impacts. During both construction and operations, the project would result in emissions that are less than the screening-level thresholds for all criteria pollutants except VOCs. VOCs would exceed the threshold during Year 4 of construction. Because architectural coatings would comply with the SDAPCD's low-VOC requirements, there are no additional feasible mitigation measures to reduce impacts to less than significant. VOC emissions are below the significance threshold for all other years of construction. To reduce the emissions to the extent feasible, fugitive dust control measures will be implemented during construction. Measures that are incorporated into the project description to reduce emissions associated with construction include the following:

- Application of water three times daily during grading on active grading sites
- Reduce speeds to 15 mph on unpaved roads
- Clean paved roads
- Use architectural coatings with a VOC content of 100 g/l or less for exterior coatings and 50 g/l or less for interior coatings
- Require the construction fleet to use any combination of catalytic converters, diesel oxidation catalysts, diesel particulate filters, and/or ARB certified Tier III or Tier IV equipment.

These measures constitute best management practices for dust control, architectural coatings, diesel particulate, and construction equipment emissions.

Operational emissions would be associated with traffic accessing the project, and with area sources such as energy use and landscaping. Based on the evaluation of air emissions, the project emissions would exceed the screening-level thresholds for VOCs, NO_x, PM₁₀, and PM_{2.5}. However, because the project would provide a mix of uses and would provide residential uses near occupational locations, it is likely that siting these residential uses in the East Otay Mesa Specific Plan Area would reduced, rather than increase, VMT and therefore emissions on an regional basis.

However, because emissions of VOCs criteria pollutants would exceed the County's screening-level thresholds, impacts would be significant. The project design includes features that would reduce VOC emissions to the extent feasible, including providing a mix of uses in the Otay Mesa area that reduces VMT overall within the region; use of natural gas fireplaces; and providing on-site residential, employment, and retail uses. The VOC emissions include emissions from

consumer products that cannot be controlled by the applicant. There are no additional measures identified that would reduce impacts to below a level of significance.

The project will result in a cumulatively considerable net increase of any criteria pollutant for which the San Diego Air Basin is non-attainment under an applicable Federal or State Ambient Air Quality Standard (including emissions which exceed the SLTs for ozone precursors listed in Table 5 of the Guidelines).

Emissions of nonattainment pollutants would be below the County's screening-level thresholds during construction. Emissions would comprise a small percentage of the overall emissions budget within the region. Construction emissions would be less than cumulatively considerable.

Operational emissions of VOCs, NO_x, PM₁₀, and PM_{2.5} are above the County's screening-level thresholds and would therefore result in a cumulatively considerable impact. There are no mitigation measures identified that would reduce this impact to below a level of significance. However, as noted above, because the project would provide residential uses in the East Otay Mesa area in close proximity to occupational uses, it is likely that the overall basin-wide emissions of these pollutants would be reduced due to less VMT to commute to places of employment.

The project will expose sensitive receptors to substantial pollutant concentrations.

As discussed in Section 4.4, the project would not expose sensitive receptors to substantial pollutant concentrations.

The project which is not an agricultural, commercial or an industrial activity subject to SDAPCD standards, as a result of implementation, will either generate objectionable odors or place sensitive receptors next to existing objectionable odors, which will affect a considerable number of persons or the public.

The project would not generate objectionable odors that would affect a considerable number of persons or the public. Odor impacts are less than significant.

3.1 Mitigation Measures Construction

Use Cleaner Engines for Construction Equipment

Water Exposed Area

Reduce Vehicle Speed on Unpaved Roads

Clean Paved Roads

3.2 Building Construction - 2018

*** 16:02:27

**MODELOPTs: RegDEFAULT CONC ELEV NODRYDPLT NOWETDPLT URBAN

*** MODEL SETUP OPTIONS SUMMARY

**Model Is Setup For Calculation of Average CONCentration Values.

-- DEPOSITION LOGIC --

**NO GAS DEPOSITION Data Provided.

**NO PARTICLE DEPOSITION Data Provided.

**Model Uses NO DRY DEPLETION. DRYDPLT = F

**Model Uses NO WET DEPLETION. WETDPLT = F

**Model Uses URBAN Dispersion Algorithm for the SBL for 266 Source(s),
for Total of 1 Urban Area(s):

Urban Population = 17865.0 ; Urban Roughness Length = 1.000 m

**Model Uses Regulatory DEFAULT Options:

1. Stack-tip Downwash.
2. Model Accounts for ELEVated Terrain Effects.
3. Use Calms Processing Routine.
4. Use Missing Data Processing Routine.
5. No Exponential Decay.
6. Urban Roughness Length of 1.0 Meter Assumed.

**Other Options Specified:

CCVR_Sub - Meteorological data includes CCVR substitutions

TEMP_Sub - Meteorological data includes TEMP substitutions

**Model Assumes No FLAGPOLE Receptor Heights.

**The User Specified a Pollutant Type of: OTHER

**Model Calculates PERIOD Averages Only

**This Run Includes: 266 Source(s); 1 Source Group(s); and 4
Receptor(s)

with: 0 POINT(s), including
0 POINTCAP(s) and 0 POINTHOR(s)
and: 266 VOLUME source(s)
and: 0 AREA type source(s)
and: 0 LINE source(s)
and: 0 OPENPIT source(s)

EOM Construction HRA 082916

**Model Set To Continue RUNNING After the Setup Testing.

**The AERMET Input Meteorological Data Version Date: 14134

**Output Options Selected:

Model Outputs Tables of PERIOD Averages by Receptor

Model Outputs External File(s) of High Values for Plotting (PLOTFILE

Keyword)

Model Outputs Separate Summary File of High Ranked Values (SUMMFILE

Keyword)

**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
m for Missing

Hours

b for Both Calm

and Missing Hours

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 54.86 ; Decay

Coef. = 0.000 ; Rot. Angle = 0.0

Emission Units = GRAMS/SEC ;

Emission Rate Unit Factor = 0.10000E+07

Output Units = MICROGRAMS/M**3

**Approximate Storage Requirements of Model = 3.6 MB of RAM.

**Input Runstream File: EOM Construction HRA 082916.DTA

**Output Print File: EOM Construction HRA 082916.LST

**File for Summary of Results: F:\BEEEST\East Otay Mesa SPA\EOM Construction HRA
