

APPENDIX I

UNDESIRABLE PLANTS

The following vegetation is more susceptible to burning due to rough or peeling bark, production of large amounts of litter, vegetation that contains oils, resin, wax or pitch, large amounts of dead material in the plant, or plantings with a high dead to live fuel ratio. To reduce the possibility of fire spreading to structures, these plants should be avoided within the first 50 feet adjacent to a structure.

- Eucalyptus
- Pines
- Rosemary
- Larger California sagebrush
- Chamise
- Tea trees
- Pepper trees
- Acacias
- Junipers
- Pampas grass
- Palms

If the owner wishes to retain these plants, they must be adequately maintained (pruning, thinning, irrigation, litter removal and weeding) to reduce the potential for spreading a fire.
