Ms. Susan Harris

As a Jacumba resident, I am against the industrial-size JVR Energy Park that would place 300,000 photovoltaic cells, 75 battery storage containers and additional electrical infrastructure on 643 acres of the best agricultural or residential land in Jacumba.

This enormous project as described in the DEIR is wrong for our rural landscape. It will lower property values, impact wildlife habitat, our community character, and eliminate scenic vistas. It will squander any potential for expanding our town because it consumes the best land next to our village. It may also negatively impact local temperatures when Santa Ana winds pass across hundreds of acres of hot solar panels, drying out trees and vegetation at the eastern end of town. The JVR Park does not conform to the Mountain Empire Sub-Regional Plan adopted on August 3, 2011. The County Planning Commission and County Supervisors must reject this project and choose the no project alternative!
