Discussion

Property is located in a rural area with no surrounding development and 4.2 miles down a road that either dead-ends or ends in MCAS Camp Pendleton. A Semi-Rural density would not support the Community Development Model or Guiding Principle #9. Also, the property is within the Very High Fire Hazard Severity Zone. The SR4 designation is more intensive than the range of alternatives that was analyzed in the Draft EIR, where RL40 was the most intensive density.

Discussion

Property is located in a remote area with no surrounding development; therefore, the Semi-Rural designation would not support the Community Development Model or Guiding Principle #9. Also, the property is almost entirely constrained by slopes greater than 25%, sensitive biological habitat, and within the Very High Fire Hazard Severity Zone. As such, the property owner's request would not be supported by Guiding Principle #5. The property also contains farmlands of local importance and prime agricultural soils. The requested SR4 designation is more intensive than the range of alternatives that was analyzed in the Draft EIR, where RL40 was the most intensive density.
