PC/Staff Recommendation

### Discussion

This property addressed during the 2004 Residential Referrals as part of a sweeping change where the Board of Supervisors directed staff not to apply the RL80 density or lower within the Ramona Community Planning Area on the Referral Map. The property is located outside of the County Water Authority and is within an Agricultural Preserve. The request for SR4 would be an increase over and above the density of the existing General Plan, and due to its location in Rural Lands would not be supported by the Community Development Model or consistent with adjacent properties. The property is nearly entirely constrained by steep slopes and is within the Very High Fire Hazard Severity Zone.

PC/Staff Recommendation

### Discussion

The property is located outside of the County Water Authority and is within the Very High Fire Hazard Severity Zone. It is adjacent to the Ramona Country Estates, which has Village Residential densities, so a Semi-Rural designation could be considered consistent with the Community Development Model. It was a Referral in 2004 (#130 Carol Leone), to designate the property as Semi-Rural 10 and the Board of Supervisors directed staff to apply a SR10 designation to the Referral Map. The property has high biological sensitivity and some steep slopes.

### Discussion

The property is located outside of the County Water Authority boundary and within an Agricultural Preserve. It is remote, has very high biological value, steep slopes, and is within the Very High Fire Hazard Severity Zone. While the Draft General Plan designation reduces the density for the large holding, it also relaxes minimum lot sizes from 40 to 8 acres, which would allow a clustered subdivision to occur for the remaining development potential. In 2004, the Board of Supervisors directed staff not to assign densities lower than RL40 on the Referral Map for the community of Ramona.

### Discussion

The property is located outside of the County Water Authority boundary and within an Agricultural Preserve. The request for a Semi-Rural 10 designation a higher density then any of the land use alternatives analyzed by the EIR, including the existing General Plan. The site is remote and is surrounded by other parcels with Rural Lands designations; therefore, a Semi-Rural 10 designation would result in a spot designation and not support the Community Development Model.

### Discussion

This property was part of a 2004 Residential Referral; however, the Board of Supervisors did not provide any specific direction for staff for the Referral Map. The property is located outside of the County Water Authority, adjacent to the recently approved Montecito Ranch Specific Plan Development. The project has an approved Tentative Map 5194, Horizon View Estates. The Parcel Map is not yet completed, and if the TM expires the yield of 36 lots will not be able to be achieved under the proposed General Plan Update Density. An SR4 designation is required to accommodate the TM. This change alone would not be a spot designation because of the SR4 proposed across SR-78, however, it could also be added to the single triangular parcel to the west and some parcels to the north, which would not have additional subdivision potential with the change.

PC/Staff Recommendation

### Discussion

This property was designated Village Residential 15 on all of the General Plan Update alternatives, along with a larger strip of property along Raymond Avenue.. During the Zoning Ordinance Consistency Review this area was looked at by the Planning Commission, who recommended staff change recommendations on this property and notify the property owners who may not be aware of the change. Ms. Blaha voiced opposition at the time to the reduction. While the site does not have FEMA Floodplains on it, there is known flooding concerns nearby, and in the Draft Ramona Drainage Facilities Master Plan there are two projects that are listed for improvements.

The site is located adjacent to Commercial property along Main Street, with Village Residential proposed to the northeast and half acre lots to the south and southwest.

PC/Staff Recommendation

### Discussion

The project site is currently a project that is in process, the Cumming Ranch Specific Plan. The project has coordinated with General Plan Update Staff, who in February presented revisions to the Land Use Map to the Planning Commission to accommodate the Cumming Ranch Project. The designations as applied demonstrate that the project is locating the development closer to Highland Valley Road, and away from the sensitive grasslands. The current request by the property owners is not consistent with those revisions, and instead requests to designate the entire site as Semi-Rural 4, which does not recognize that the project is siting the development on parcels smaller than four acres closer to the road and preserving the remainder sensitive habitat areas as open space.

### Discussion

This property is a 2004 Residential Referral where the Board of Supervisors directed staff not to apply densities lower than RL40 on the Referral Map in the community of Ramona. The property is located outside of the County Water Authority within an Agricultural Preserve. It has very high habitat value, and is located in the Very high Fire Hazard Severity Zone. The requested Rural Lands 40 designation would be equivalent to the existing General Plan, as well as the Referral Map.

### Discussion

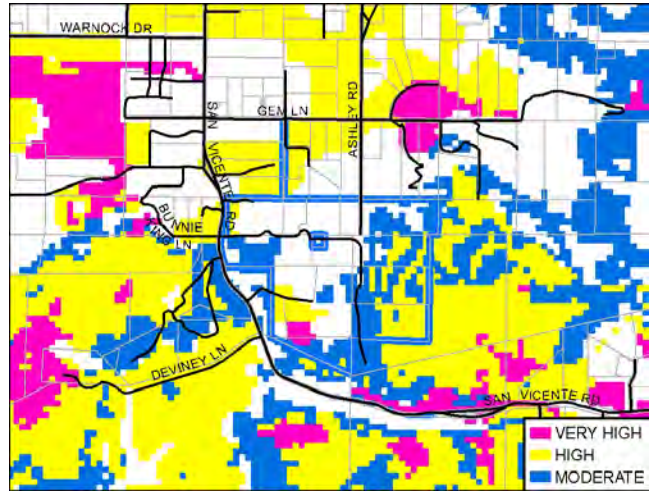

This area is located north of the Barnett Ranch Wildlife Corridor and along San Vicente Road. The area is designated Semi-Rural 10 on the General Plan Update Alternatives, and has been designated so since 2002. However it is documented that the Ramona Community Planning Group both in 2002 and in recent motions supports the designation of Semi-Rural 4 on the property.

RPC/Staff Recommendation

### Discussion

This area is located north of the Barnett Ranch Wildlife Corridor and to the east of San Vicente Road. The area is designated Semi-Rural 10 on the General Plan Update Alternatives, and the request to designate the property as Semi-Rural 4 would be a spot zone. The resulting redesignation of other properties to address the spot zone would result in additional development that would need to be analyzed in the EIR. The referral is close, but not adjacent to referral RM20, which covers properties on the eastern side of San Vicente Road.

### Discussion

Property request consists of three parcels in a holding of 200 acres on the eastern side of the Ramona Planning Area. It is adjacent to the RM5 referral, which is also a request to change the land use designation to Rural Lands 40. Like RM5, it is remote, has very high biological value and is within the Very High Fire Hazard Severity Zone. The additional development in this constrained area would conflict with guiding principles 5 and 9.
