Dear Commission -

I am a bystander observer who is just interested in this process so we can have good government in San Diego County.

Map 13a 2-4 looks really good. You meet every need of every group who has been testifying. Amazing job! Very very impressive.

You can fix the population imbalance easily with a few swaps:

- Put most of Little Italy into the south Border District. You only need a small strip along the coast in the purple in order to connect to Coronado. Right now there are about 10,000 extra unneeded people in the purple. This swap will significantly increase the Border District population and decrease the Coastal District population.

- Put Potrero along the border into the South Border District. This will increase the Border District population.

- Give the rest of the area east of 163 and 805 to the Central green District. This will decrease the Coastal District population.

- Give the rest of the northern unincorporated area from Valley Center east to East County District. This will increase the East County population.

With these amendments to balance population, we will have a wonderful map for San Diego County.

Thank you.
